BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Assessment Feedback and Target Setting

Name _____ **Class** _____ **Date** _____ **Time** _____ **Teacher** _____

Do Now - Four retrieval questions

1. Which law addresses unauthorised access to a computer system?

2. What can frequent device replacement increase?
   A) Available raw materials
   B) Battery life of old devices
   C) Reuse of existing devices
   D) Electronic waste

3. "Unauthorised access is lawful whenever the attacker does not delete files." Correct this. Explain why.

4. A pupil uses a browser and editor at once. Staff and pupils need different access rights. Correct both claims. Explain why. (a) Each app needs its own CPU. (b) Every user needs full access.

Today's objectives

Explain the core ideas of assessment feedback and target setting using accurate OCR terminology. Apply a clear method to the worked and guided questions.

Key vocabulary - Read, cover, recall

Classify errors
Separate knowledge gaps, misreading command words and calculation/algorithm mistakes.

Marking points
Award credit only for information that answers the question.

Correct at source
Redo the reasoning or trace, not only the final statement.

Retest learning
Attempt a different question on the same concept without relying on copied notes.

BLACK PEN: Write one definition in your own words.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Learn and practise

New Learning - Key ideas

Classify errors
Separate knowledge gaps, misreading command words and calculation/algorithm mistakes.

Marking points
Award credit only for information that answers the question.

Correct at source
Redo the reasoning or trace, not only the final statement.

Retest learning
Attempt a different question on the same concept without relying on copied notes.

I Do - Worked model

A 4-mark answer says 'cache stores memory to make CPU faster'. Improve it.

- State that cache holds frequently accessed data/instructions.
- Explain faster access than main RAM.
- Explain fewer slow memory accesses.
- Connect to reduced CPU waiting and improved performance when accesses hit cache.

We Do - Guided practice

1. A network answer says 'the router sends all data everywhere'. Improve it.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Think and write

Code First - Predict > Write > Test > Improve

YOUR TASK: Correct the index so this array prints the number 8.

```
array weights = [1,2,4,8]
print(weights[2])
```

You Do - Independent exam questions

Q2. Explain why a bare 'faster' may fail to score an explanation mark. [2 marks]

Q3. Correct the statement: 'MAC addresses route packets between networks'. [2 marks]

Q4. Describe one effective correction routine after an assessment. [3 marks]

Exit Ticket - True or False?

A model answer should be memorised word-for-word instead of explaining the missing reasoning.

TRUE [ ] **FALSE [ ]**

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Review & improve

GREEN PEN: Tick each correct point; correct mistakes.

Do Now - Model answers

1. The Computer Misuse Act 1990.

2. D - Electronic waste

3. Unauthorised access to computer systems and related prohibited activities.

4. (a) The OS shares memory, resources and CPU time between apps. (b) User management controls accounts, login checks and access rights.

I Do - Explain the model

State that cache holds frequently accessed data/instructions.

Explain faster access than main RAM.

Explain fewer slow memory accesses.

Connect to reduced CPU waiting and improved performance when accesses hit cache.

We Do - Model answers

1. Compare with a switch forwarding frames on a LAN.

Code First - Answer

array weights = [1,2,4,8]
print(weights[3])
Expected output: 8

You Do - Self-mark

Q2: It lacks the causal mechanism and scenario-specific improvement required by the question.

Q3: IP addressing/routing is used by routers; MAC addresses support local data-link forwarding.

Q4: Identify missing mark point, rewrite fully and attempt a new transfer question.

GREEN PEN: Choose the hardest answer. Correct it on lined paper.
