STAFF REVIEW · H446 100 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. GPU.

2. Actually running independent work at same time.

3. A task needs another task's result.

4. 12.

I Do — source worked steps

1. Follow the reasoning — Each pixel can receive similar operation in parallel; many GPU threads process different positions.

We Do — guided CHECK

1. Follow the reasoning
Not necessarily: dependence limits simultaneous work, and data-transfer overhead may dominate.

You Do — source mark schemes

1. Many parallel lanes/threads [2], pixels independent [2], throughput on similar operations [2].

2. AI tensor/matrix workloads [3], scientific modelling independent calculations [3] or valid alternatives.

3. Short sequential: CPU avoids transfer/parallel overhead [2], massive independent: GPU throughput [2], branches/memory/bandwidth caveats [2].

Exit Ticket — source answer

1. False. GPUs also accelerate AI and scientific computation.
