# STAFF REVIEW · H446 104 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

## Do Now — source answers

1. Retains contents without power.

2. Time to position/locate data for a storage access.

3. Light/laser.

4. 8 bits.

## I Do — source worked steps

1. Explain the choice — Flash SSD: no spinning platter and generally quick random access; still requires backups.

## We Do — guided CHECK

1. Explain the choice
Magnetic HDD is a reasonable candidate because of capacity and cost per GB; validate resilience and transfer needs.

## You Do — source mark schemes

1. HDD magnetised platter [2], DVD laser optical disc [2], USB SSD flash electronic cells [2].

2. No moving parts → vibration resistance [2], fast random access [2], often higher cost/GB or write endurance trade-off [2].

3. Offline packs optical/removable flash depending hardware access [4]; HDD/SSD archive depending cost/speed [2]; backups and compatibility [2].

## Exit Ticket — source answer

1. False. HDD uses magnetic read/write heads; optical discs use lasers.
