STAFF REVIEW · H446 105 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. RAM, plus CPU caches/registers.

2. Startup/firmware instructions without power.

3. Virtual storage.

4. 0, because D is sampled at the active edge.

I Do — source worked steps

1. Explain the choice — On one or more remote network storage devices, even if Finder/Explorer shows a drive like local storage.

We Do — guided CHECK

1. Explain the choice
No. It is virtual memory under 1.2.1, using secondary storage for memory pages.

You Do — source mark schemes

1. RAM active programs/data [2], typically volatile [1], ROM/firmware boot instructions [2], non-volatile [1].

2. Remote physical storage appears local/logical [2], network drive/cloud [2], access and scalability [2], dependency/network/security concern [2].

3. Virtual storage means remote file store [2], virtual memory uses secondary storage for memory pages [2], they are different concepts in OCR spec [2].

Exit Ticket — source answer

1. False. That describes virtual memory, not virtual storage.
