STAFF REVIEW · H446 112 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. It lets the OS communicate with/control a specific hardware device.

2. A link/reference to the next node (for a singly linked list).

3. In its left subtree (under the chosen no-duplicate convention).

4. Its element locations can be calculated from base address and index.

I Do — source worked steps

1. Model answer — A DBMS is better: structured records, querying, concurrency, constraints and access rights. A spreadsheet is useful for small-scale analysis but is not ideal as a multi-user transactional store. — Check: link each claim to the scenario and use precise OCR terminology.

We Do — guided CHECK

1. What must we decide?
Identify the inputs, relevant facts and exact output or judgement required.
Work through the method
Use the middle stage of the visual to follow the process and state each intermediate result.
Shared worked answer
CAD suits accurate technical modelling with dimensions and revision. A backup utility produces recoverable copies; design software and utility software have different purposes.

You Do — source mark schemes

1. Desktop publishing/page-layout software [2], control of typography/image placement [2], export/print layout advantage [2].

2. Applications solve user tasks [2]; utilities maintain/protect/optimise system [2]; relevant examples [2].

3. Database/inventory app [2], backup utility [2], accessibility/security [2], balanced cost/training/connectivity limitations [2].

Exit Ticket — source answer

1. False. A word processor is an application.
