# STAFF REVIEW · H446 113 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

## Do Now — source answers

1. Backup and restore utility.

2. X is removed; Y remains at the front.

3. O(n).

4. B, because a stack is LIFO.

## I Do — source worked steps

1. Model answer — Relevant open-source licence can permit modification and inspection, allowing accessibility changes. Risk: the council must ensure support, security patching and licence compliance; source availability alone guarantees neither quality nor safety. — Check: link each claim to the scenario and use precise OCR terminology.

## We Do — guided CHECK

1. What must we decide?
Identify the inputs, relevant facts and exact output or judgement required.
Work through the method
Use the middle stage of the visual to follow the process and state each intermediate result.
Shared worked answer
A proprietary supported package may offer a service contract and managed upgrades; assess data export, recurring licensing, vendor lock-in and contract quality. Source model alone does not decide security.

## You Do — source mark schemes

1. Open source provides source and rights under its licence [2]; closed source restricts source/modification [2]; licensing conditions matter [2].

2. Price and source-code rights differ [2]; a free proprietary program can withhold code/modification rights [2].

3. Modification/audit potential [2], support skills/security updates [2], licence/TCO [2], justified conclusion for circumstances [2].

## Exit Ticket — source answer

1. False. Security depends on implementation, maintenance and context.
