STAFF REVIEW · H446 118 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Waterfall.

2. 10.

3. A link/reference to the next node (for a singly linked list).

4. In its left subtree (under the chosen no-duplicate convention).

I Do — source worked steps

1. Model answer — Automated tests written before/with code (TDD) define intended behaviour, continuous integration runs regression tests on each change, and refactoring improves design without changing observable behaviour. — Check: link each claim to the scenario and use precise OCR terminology.

We Do — guided CHECK

1. What must we decide?
Identify the inputs, relevant facts and exact output or judgement required.
Work through the method
Use the middle stage of the visual to follow the process and state each intermediate result.
Shared worked answer
Create an early working prototype, invite feedback, revise the interface rapidly and iteratively converge on requirements. Beware treating a rushed prototype as production-quality architecture without further work.

You Do — source mark schemes

1. Test first/red-green-refactor cycle [3]; two developers collaborating with shared review/knowledge [3].

2. Visible working prototypes [2], frequent user feedback [2], rapid refinement of requirements [2].

3. XP testing/CI benefits [2], RAD feedback benefits [2], rushed assurance/traceability risks [2], justified safeguards/recommendation [2].

Exit Ticket — source answer

1. False. It improves structure while preserving observable behaviour.
