STAFF REVIEW · H446 121 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. It reveals execution path and when variable values change.

2. B, because a stack is LIFO.

3. It discards half the search space using an ordering comparison.

4. 1.

I Do — source worked steps

1. Model answer — age = int(input("Age")) — while age < 11 OR age > 19 — endwhile — print(age) — Note: this handles numeric range, not a non-numeric input error without extra handling. — Check: link each claim to the scenario and use precise OCR terminology.

We Do — guided CHECK

1. What must we decide?
Identify the inputs, relevant facts and exact output or judgement required.
Work through the method
Use the middle stage of the visual to follow the process and state each intermediate result.
Shared worked answer
score = int(input("Score"))
while score < 0 OR score > 100
endwhile
print(score)
Explain why OR, not AND, joins the invalid conditions.

You Do — source mark schemes

1. Read integer [2], loop while <1 with re-prompt [2], terminate and output [2].

2. Cannot be below 11 and above 19 simultaneously [3]; use OR to detect either invalid condition [3].

3. Type checking/error handling [3], range validation [2], three labelled normal/boundary/erroneous tests [3].

Exit Ticket — source answer

1. False. An invalid input is below the minimum OR above the maximum.
