STAFF REVIEW · H446 122 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. OR.

2. A link/reference to the next node (for a singly linked list).

3. In its left subtree (under the chosen no-duplicate convention).

4. Its element locations can be calculated from base address and index.

I Do — source worked steps

1. Model answer — Use iterative development for changing fare rules with documented acceptance milestones for launch. Fare algorithm: collect zones and passenger category, select valid tariff, compute fare, reject invalid input and test boundary zones. — Check: link each claim to the scenario and use precise OCR terminology.

We Do — guided CHECK

1. What must we decide?
Identify the inputs, relevant facts and exact output or judgement required.
Work through the method
Use the middle stage of the visual to follow the process and state each intermediate result.
Shared worked answer
RAD or agile prototypes gather pupil feedback quickly; keep data security and payment assurance as formal checks. Algorithm checks available stock, valid quantity and eligibility before confirming order.

You Do — source mark schemes

1. Functions: search/book/cancel etc [3]; non-functional: accessibility, security, response times, reliability etc [3].

2. Documented staged/hybrid development with control [2], traceable tests/compliance [2], limitations or alternative [2].

3. Capacity check [2], valid request/quantity [2], normal/full/over-limit tests [2], method choice linked to changes/risks [2].

Exit Ticket — source answer

1. False. Those constraints drive the choice.
