STAFF REVIEW · H446 134 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Integrity, when compared against a trusted expected digest.

2. The longest-waiting item at the front.

3. A key made from two or more attributes together.

4. Sum 0, carry 1.

I Do — source worked steps

1. Pupil ID 7: Sam — Find the given data and name the required result.

2. Bookings refer to PupilID 7 — Explain why this intermediate stage is necessary.

3. Change name once — Pupil(PupilID PK, Name) and Booking(BookingID PK, PupilID FK, ClubID FK) separate data. A pupil name is held once and each booking refers to the pupil by ID, reducing update anomalies.

We Do — guided CHECK

1. Device PK DeviceID
Find the given data and name the required result.
Loan PK LoanID
Explain why this intermediate stage is necessary.
Loan FK DeviceID
DeviceID uniquely identifies each device (PK). LoanID identifies each loan (PK). Loan.DeviceID is an FK to Device.DeviceID. Borrower may later reference a Borrower table.

You Do — source mark schemes

1. Unique PK [2], FK references primary/candidate key in another table [2], valid specific column examples [2].

2. Duplication wastes storage [2], inconsistent updates [2], insert/delete anomalies [2].

3. Customer(CustomerID PK,...)[2], Order(OrderID PK,...)[2], Order.CustomerID FK[2], accurate one-to-many/benefits [2].

Exit Ticket — source answer

1. False. Many child records may share one valid parent key.
