STAFF REVIEW · H446 142 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Durability.

2. Eight.

3. Stack.

4. Tracking variable state changes as an algorithm runs.

I Do — source worked steps

1. Same school buildings — Identify the relevant information and make a prediction.

2. Local switched/Wi-Fi network — Explain the change using correct technical terms.

3. Standard protocols — A school LAN connects local devices. Ethernet/Wi-Fi standards support compatible links and IP-based protocols allow data exchange. A router becomes relevant for communication beyond the local IP network.

We Do — guided CHECK

1. Separate school LANs
Identify the relevant information and make a prediction.
Router/provider link
Explain the change using correct technical terms.
Connected WAN
It is a WAN connecting multiple site LANs. Routers and service-provider infrastructure carry traffic between sites; secure connections and availability matter.

You Do — source mark schemes

1. LAN limited local scope [2] and example [1], WAN wider link of networks [2] and example [1].

2. Common data formats/behaviours [2], compatibility/interoperability [2], reliable predictable exchange [2].

3. Switch [2], wireless access point [2], router [2], justification of links/traffic [2].

Exit Ticket — source answer

1. False. The distinction is geographical scope/connection of distant networks.
