Exit Ticket · reflect and retrieve

Exit Ticket

HTML provides the semantic structure of a page, while CSS usually controls presentation.

Use key vocabulary from memory

1. Explain HTML in your own words.

2. Explain semantic element in your own words.

3. Explain attribute in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.

Do Now · retrieval

Lesson 150 · HTML: Semantic Structure, Links and Forms

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

Which model offers central administration for a shared school database?

Q2

What is the result of an AND gate with inputs 1 and 0?

Q3

What is a foreign key used for?

Q4

Which storage type is volatile?

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Document structure — Head contains metadata; body contains displayed page content.

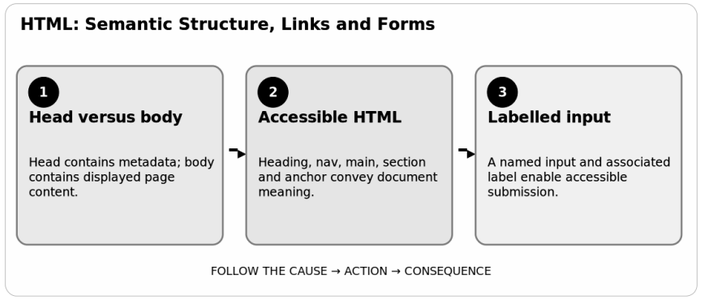

Core idea 2

Semantic content — Heading, nav, main, section and anchor convey document meaning.

Core idea 3

Forms and labels — A named input and associated label enable accessible submission. UTF-8 supports a wide range of characters; CSS must not communicate meaning by red/green colour alone, and readable contrast is needed for inclusive design.

Key visual · complete concept

Annotate the key visual

Explain which labels or features show the main process.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

Write a small HTML form collecting a username and email address; justify semantic/accessibility choices and why server validation is still needed. [8]

Check that you have used the technical terms and explained your decisions.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

Write suitable HTML for an h2 heading and a working hyperlink to resources.html labelled Resources. [4]

Question 2

Explain roles of head, title, main, label and input in a valid web page. [6]

Check that you have used the technical terms and explained your decisions.

New Learning · applying the ideas

Vocabulary · use the correct technical terms

HTML — Markup language describing page content and structure.

semantic element — Tag that conveys the role of content.

attribute — Name–value metadata written inside a start tag.

form — Web element grouping controls for submission.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

Problem

Improve a web page with a heading, a navigation link and a labelled age field.

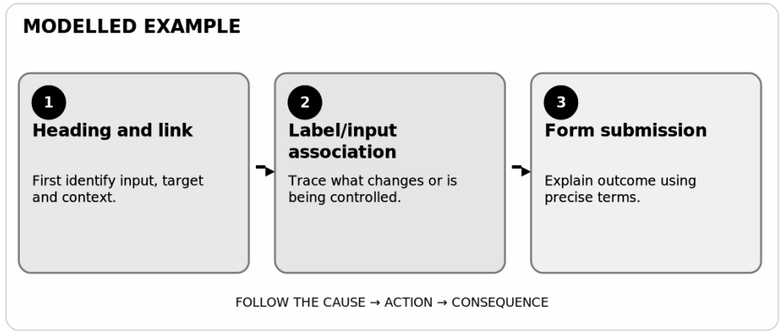

Follow the worked method

1. Heading and link — Identify the facts and make an initial prediction.

2. Label/input association — Explain the mechanism or trace the intermediate stage.

3. Form submission — Example: <h1>Computer Science</h1> <nav>Revision</nav> <form action="/save" method="post"><label for="age">Age</label><input id="age" name="age" type="number" min="11"></form> The label's 'for' matches the input 'id'; the input's 'name' is the submitted key.

Source model · final illustrated step

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Form and label
Identify the facts and make an initial prediction.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.
