Lesson 151 · CSS: Selectors, Cascade, Specificity and the Box Model

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

How does HTML associate a label with an input?

Q2

What data structure follows LIFO?

Q3

What is a database foreign key?

Q4

What is the role of a router?

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Select — Element p, class .notice and ID #notice target elements.

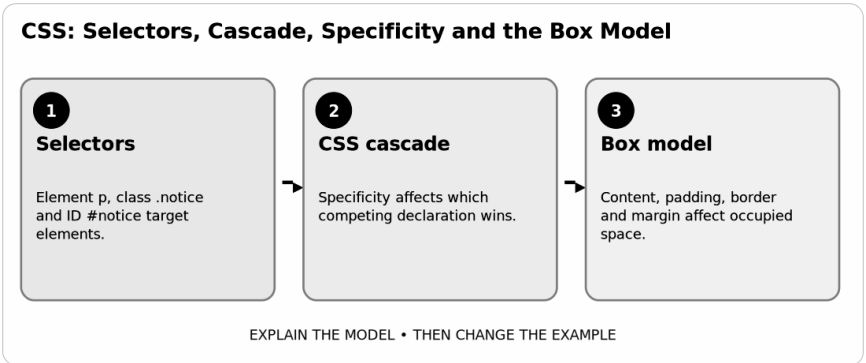

Core idea 2

Prioritise — Specificity affects which competing declaration wins.

Core idea 3

Measure — Content, padding, border and margin affect occupied space.

Key visual · complete concept

Annotate the key visual

Explain which labels or features show the main process.

New Learning · applying the ideas

Vocabulary · use the correct technical terms

selector — Rule matching HTML elements.

specificity — Priority of selectors among competing declarations.

box model — Content plus padding, border, margin.

cascade — Conflict resolution for CSS rules.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

Problem

p{color:black}, .notice{color:blue}, #flag{color:green} all match one element. Which colour?

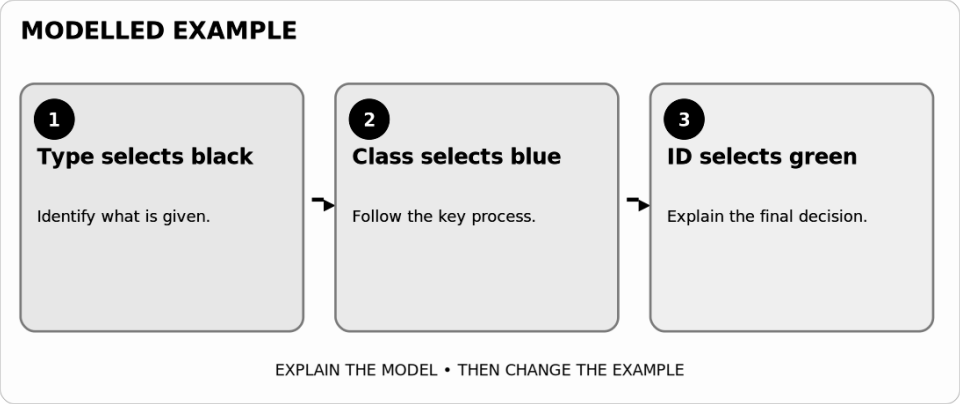

Follow the worked method

1. Type selects black — Identify the input or diagram and predict the first result.

2. Class selects blue — Follow the second stage and explain its importance.

3. ID selects green — Green: matching ID selector generally outranks the class and element selectors where origin, importance and layers are equal.

Source model · final illustrated step

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Content 180px
Identify the input or diagram and predict the first result.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

Write CSS to make h2 navy and .key items bold. [4]

Question 2

Explain relative specificity of p, .intro and #intro when all match an element. [6]

Check that you have used the technical terms and explained your decisions.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

A content-box panel is 240px with 12px horizontal padding, 3px borders and 8px margins on both sides. Calculate overall space and compare border-box. [8]

Check that you have used the technical terms and explained your decisions.

Exit Ticket · reflect and retrieve

Exit Ticket

An ID selector generally has higher specificity than a simple element selector.

Use key vocabulary from memory

1. Explain selector in your own words.

2. Explain specificity in your own words.

3. Explain box model in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.
