STAFF REVIEW · H446 157 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Client-side checks can be bypassed, so authoritative checks belong on the server.

2. Allocating and protecting memory for running programs.

3. O(log n) on sorted random-access data.

4. Encryption in transit does not establish trustworthiness of operator.

I Do — source worked steps

1. Identify sensitive data — Identify the relevant facts, purpose and authority.

2. Restrict justified access — Discuss which law or safeguard fits the situation.

3. Secure, minimise and review — Medical information is sensitive personal data with stronger protections. Restrict access by legitimate role, use a proper lawful basis and relevant special-category condition, minimise collected fields, keep information accurate and protect access. DPA 1998 is named historically by OCR but current UK law is DPA 2018/UK GDPR.

4. Inspect before predicting — Missing registration entries are not necessarily absences. An automated score based on incomplete records can be inaccurate. Analyse how data were collected, not only the calculated result.

5. Bias, monitoring and transparency — Continuous pupil monitoring may be intrusive and disadvantage some groups if context is ignored. A system must have a proportionate purpose, access safeguards and a meaningful way to question errors.

6. Human review before action — No automatic sanction. Check original entries, pupil circumstances and the model’s limitations; use verified information for supportive intervention. Compliance with data protection law alone does not guarantee an ethically fair decision.

We Do — guided CHECK

1. Quiz purpose identified
Identify the relevant facts, purpose and authority.
Remove excess personal fields
Discuss which law or safeguard fits the situation.
Give clear privacy notice
Under data minimisation, only collect what is needed for the stated function; avoid unnecessary personal identifiers, explain the purpose, set retention and secure any necessary records. A school also considers transparency and the rights of data subjects.

2. Challenge the assumption
Does response time reliably measure ability? What alternative explanations might exist?
Identify two harms

Slow answers may reflect careful thinking, assistive technology, interrupted access or additional processing time. Automatic labels can be misleading and discourage pupils. Persistent monitoring also raises privacy concerns.
Recommend a proportionate alternative
Use time only as limited contextual evidence, check other learning information, minimise unnecessary personal tracking and allow teacher/pupil challenge. Avoid inferring ability from timing alone.

You Do — source mark schemes

1. Lawful/fair handling [2], accuracy [2], purpose/adequacy/security/retention with relevant examples [2].

2. 1998 named as historical spec reference [2], replaced by DPA 2018 [2], UK GDPR and later amendments also relevant [2].

3. Lawful/transparent purpose and no unjustified publication [2]; minimise data and restrict access [2]; unreliable/possibly biased automated flag from incomplete data [2]; verify source records and enable human review, explanation and proportionate supportive action [2].

Exit Ticket — source answer

1. False. The 1998 Act was replaced by the DPA 2018; UK GDPR also applies.
