STAFF REVIEW · H446 200 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. As the left child of 10.

2. It identifies the next node.

3. The first element is at index 0.

4. Left child of 30.

I Do — source worked steps

1. Predict — Every vertex connects to the other two vertices.

2. Confirm and explain — A:B,C; B:A,C; C:A,B. Each undirected edge is listed from both endpoints.

We Do — guided CHECK

1. Confirm and explain
Full lists: A:B; B:A,C; C:B,D; D:C.

You Do — source mark schemes

1. Vertices A,B,C,D; three edges.

2. A:B; B:A,C; C:B,D; D:C.

3. An adjacency matrix uses $O(V^2)$ space irrespective of edge count; adjacency lists use $O(V+E)$ space and usually save memory for sparse graphs.

Exit Ticket — source answer

1. True. Each undirected connection is recorded from both endpoints.
