STAFF REVIEW · H446 184 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Do Now — source answers

1. Calls 582 → 58 → 5; returns 1 → 2 → 3. The digit count is 3.

2. 4 times: i is 0,1,2,3.

3. false. Both must be true for AND.

4. [3,7,5].

I Do — source worked steps

1. Predict first — Compare (6,2), (6,5), then (6,1).

2. Model solution — After swaps: [2,6,5,1] → [2,5,6,1] → [2,5,1,6]. The last value is fixed.

We Do — guided CHECK

1. Model solution
8 with 3, then 8 with 7, then 8 with 4. The result is [3,7,4,8].

You Do — source mark schemes

1. [3,6,2,7]. Compare and swap 7 with 3, 6, then 2.

2. Pass 1 [3,6,2,7]; pass 2 [3,2,6,7].

3. The first pass makes no swaps. swapped remains false, so the loop breaks because the sequence is already sorted.

Exit Ticket — source answer

1. False. An already sorted array needs no swaps.
