Exit Ticket · reflect and retrieve

Exit Ticket

“The system is fast. However, it could invade privacy. Therefore, use it.” is already a well-justified argument.

Use key vocabulary from memory

1. Explain stakeholder in your own words.

2. Explain false positive in your own words.

3. Explain bias in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.

Do Now · retrieval

Build an argument about AI monitoring

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

What is automated decision-making?

Q2

Why is data minimisation useful?

Q3

What is a false positive?

Q4

Stack push 3, push 7, pop, push 2. Give bottom-to-top stack and popped value.

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Knowledge before judgement — An alert is an estimate, not proof. False positives flag harmless activity; false negatives miss genuine concerns. Overall accuracy can hide different error rates for different groups.

Core idea 2

Privacy and fairness — Monitoring can reveal sensitive activity. Limit collection and access to what the purpose requires. Biased training data or poor context can make particular groups more likely to be flagged unfairly.

Core idea 3

People and work — Automating the first scan could save staff time. Checking alerts, training and appeals also require time and skills. Work may shift towards review rather than simply disappear.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

An employer proposes AI shortlisting trained on past hiring decisions. It would reject applicants with career breaks without review. Evaluate the proposal in a short paragraph, considering applicants and recruitment staff. Use your own structure.

Check that you have used the technical terms and explained your decisions.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

Return to the original proposal: trained staff check alerts and there are no automatic sanctions. Write three sentences developing one benefit for pupils. Use: point → why → consequence.

Question 2

Changed proposal: an alert now triggers an automatic detention; a pupil can appeal afterwards. Evaluate this change in a short paragraph. Develop a benefit, challenge it and reach a justified judgement.

Check that you have used the technical terms and explained your decisions.

New Learning · applying the ideas

Core idea 4

Develop the reasoning — Name a stakeholder, explain the mechanism, then show a consequence. “It saves time” is a point; “staff can review a concern sooner, so a pupil may receive earlier support” develops it.

Core idea 5

Weigh and decide — Ask what weakens the benefit: false alerts, staff capacity or intrusive collection. Judge which matters most here and give conditions. Legal compliance alone does not settle the ethical question.

Vocabulary · use the correct technical terms

stakeholder — A person or group affected by a decision.

false positive — An alert that incorrectly treats harmless activity as concerning.

bias — Systematic distortion that can produce unfair outcomes.

counterargument — A reason that challenges or limits an argument.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

Problem

Should the school introduce the proposed AI monitoring?

Follow the worked method

1. Point — Pupils could benefit from earlier safeguarding support. — Why this develops the argument — Name who benefits and the specific benefit; “AI is useful” would be too vague.

2. Consequence — If trained staff check those alerts promptly, they could offer help before a concern becomes more serious. — Why this develops the argument — Develop the impact on pupils and state the condition on which the benefit depends.

3. The complete model — Pupils could benefit from earlier safeguarding support. The system could flag concerning activity sooner than staff manually reviewing the same activity. If trained staff check those alerts promptly, they could offer help before a concern becomes more serious. However, legitimate research could trigger false alerts, distressing pupils and diverting staff from genuine concerns. On balance, I would support a limited, reviewed trial only if staff can check alerts promptly, collection is restricted and pupils can challenge mistakes; otherwise, I would delay introduction. — Point → explanation → consequence → counterargument → justified judgement. Use these as prompts, not a compulsory paragraph formula.

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Choose a relevant point
A. Keeping every history could intrude on pupils’ privacy.
B. Keeping every history must make pupils feel safer.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.
