BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Final Targeted Revision

Name _____ **Class** _____ **Date** _____ **Time** _____ **Teacher** _____

Do Now - Four retrieval questions

BLACK PEN: answer four questions before checking the answers.

1. What is a logic error?

2. How many different codes can 7 bits represent?

A) 7
B) 64
C) 128
D) 256

3. How does a bitmap represent pixel colours?

4. An image file is larger than its raw pixel data. "Metadata is just the colour of each pixel." Correct this. How can metadata affect file size?

Today's objectives

Explain the core ideas of final targeted revision using accurate OCR terminology. Apply a clear method to the worked and guided questions.

Key vocabulary - Read, cover, recall

Personalised revision
Choose priorities from a specific error log, not assumptions.

Interleave topics
Alternate a calculation, written explanation and algorithm trace.

Self-assessment
Mark answers against explicit expected points.

Retest
Move to new questions after correction so improvement transfers.

Write one key term and its meaning in your own words:

Do Now	I Do	We Do	You Do	Review & Improve
Recall previous learning	Read new knowledge	Practise with guidance	Work independently	Check my understanding

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Learn and practise

New learning - Key ideas

Personalised revision	Choose priorities from a specific error log, not assumptions.
Interleave topics	Alternate a calculation, written explanation and algorithm trace.
Self-assessment	Mark answers against explicit expected points.
Retest	Move to new questions after correction so improvement transfers.

I Do - One worked example

A pupil missed both virtual memory and binary-search prerequisite. Write two improvements.

1. Virtual memory: OS stores some pages on secondary storage when RAM insufficient.
2. Secondary storage accesses are slower than RAM, reducing performance if paging is frequent.
3. Binary search: array must be sorted.
4. Midpoint comparisons then safely eliminate half the range.

We Do - Guided questions

BLACK PEN: use the model, then explain your answer.

1. Correct a mixed two-mark answer: 'ROM is volatile and holds open apps'.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Think and write

Code First - Predict > Write > Test > Improve

YOUR TASK: Complete the OCR ERL conversion that displays the character for ASCII code 65.

```
code = 65
print(...)
```

BLACK PEN: predict or complete the code; test, then improve.

You Do - Independent exam questions

Q2. Explain the difference between RAM and virtual memory. [4 marks]

Q3. What is 11110000 in denary? [2 marks]

Q4. State why a merge step requires sorted sublists. [3 marks]

Exit Ticket - True or False?

Circle T or F before reviewing Page 4.

1. Repeating a copied answer is stronger evidence than independently solving a new question. ☐ T ☐ F
2. Choose priorities from a specific error log, not assumptions. ☐ T ☐ F
3. Alternate a calculation, written explanation and algorithm trace. ☐ T ☐ F

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Review & improve

GREEN PEN: tick correct marking points, then correct errors.

Choose your hardest question to rewrite in full below.

Do Now - Answers

Q1 A mistake in the algorithm that gives the wrong result, even though the code follows the language's rules. ☐

Q2 C - 128 ☐

Q3 Each pixel has a colour code stored in binary. ☐

Q4 Metadata is extra information, such as width, height or colour depth. It adds to raw pixel data, so the real file may be larger. ☐

Code First - Model

```
code = 65
print(CHR(code))
```

Output: A

We Do - Check the model

1. Correct both terms accurately. ☐

Exit Ticket - Check

1. FALSE 2. TRUE 3. TRUE

You Do - Self-mark

Q2 RAM is physical primary working memory; virtual memory uses secondary storage to back pages when RAM is insufficient. ☐

Q3 240. ☐

Q4 Choosing the smaller front item produces an ordered result only when each incoming sublist is already ordered. ☐

Try the question again

1. Copy the FULL question you found most difficult:

2. In GREEN PEN, write a complete new answer:
