DO NOW — RECALL

Operating systems and assembly challenge

Name: _____ Class: _____ Date: _____

1. Which OS component queues print requests?

2. What does LMC INP do to ACC?

3. What does Waiting mean?

4. Rising-edge D flip-flop has Q=1 and D=0 immediately before the active edge. What is Q after?

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

A print spooler.

2. Model answer

Replaces ACC with supplied input.

3. Model answer

Blocked until an event such as I/O completes.

4. Model answer

Q=0; it samples D at the clock edge.

Vocabulary — know these terms

ACC — Accumulator

Ready — Eligible for CPU

Running — Using CPU

Waiting — Blocked on event

NEW LEARNING

Read, annotate and explain

Understand

LMC INP overwrites the accumulator; STA saves the value to a mailbox.

Trace

Processes change between Ready, Running and Waiting as the OS schedules and responds to I/O.

Explain

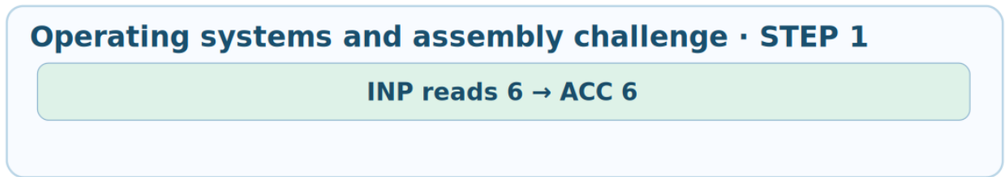

Spooling enables multiple programs to submit print jobs without monopolising the printer.

Explain one step in your own words, using the correct technical terms.

New Learning · original lesson diagrams

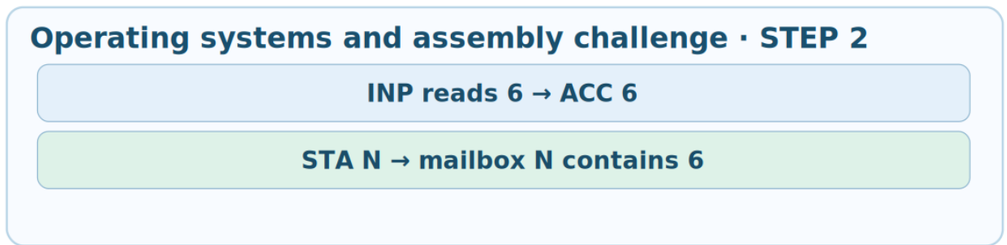

Diagrams appear after the related explanation. Annotate the original source visual.

New Learning

Operating systems and assembly challenge · STEP 3

We Do source CHECK · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

A Running process requests a disk read. Give its next states.

The process waits for disk completion, then becomes Ready for selection by the scheduler.

WEDO · STATE TRACE

WE DO — CHECK AND IMPROVE

Source-grounded model answers

CHECK only after completing the guided practice and Exit Ticket. Use GREEN PEN to improve your method and explain any error.

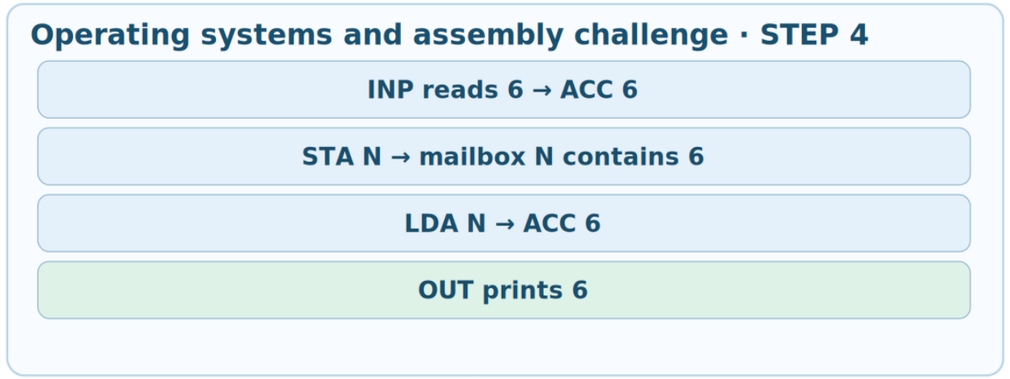

Guided 1 — CHECK

Predict first
The process waits for disk completion, then becomes Ready for selection by the scheduler.

New Learning · original lesson diagrams

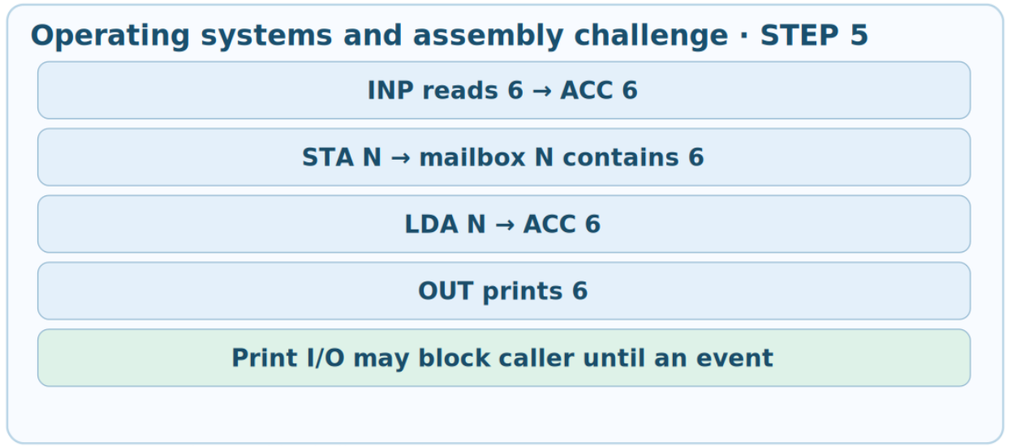

Diagrams appear after the related explanation. Annotate the original source visual.

New Learning

Operating systems and assembly challenge · STEP 4

New Learning

Operating systems and assembly challenge · STEP 5

I DO — WORKED EXAMPLE

Follow the worked method

Trace an LMC fragment with input 8.

Predict first

INP sets ACC=8; STA X writes 8 to mailbox X; the ACC remains 8. HLT ends the program.

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking.

A blocked process continues using the CPU until its I/O completes.

Circle: Confident / Getting there / Need help

Explain what you can now do independently.

GREEN PEN — Correct and explain

Choose one error. Write the correct method and explain precisely why your first response was wrong.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations or a justified explanation.

Question 3

Describe OS file access, I/O process state and spooling when an app prints saved data. [6]

I Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Trace an LMC fragment with input 8.

INP sets ACC=8; STA X writes 8 to mailbox X; the ACC remains 8. HLT ends the program.

IDO · STATE TRACE

WE DO — GUIDED PRACTICE

Try → Discuss → Improve

TRY: Attempt the guided questions in BLACK PEN. DISCUSS: Compare approaches with a partner, explain your reasoning and agree one improvement. IMPROVE: After the Exit Ticket, use the source CHECK model in GREEN PEN to correct and explain errors.

Guided 1 — TRY

A Running process requests a disk read. Give its next states.
Source code / input:
Running → Waiting → Ready → Running

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations or a justified explanation.

Question 1

State ACC and X after input 8 followed by INP; STA X. [4]

Question 2

Describe Ready, Running, Waiting and return to Ready during a disk read. [6]
