DO NOW — RECALL

Lesson 150 · HTML: Semantic Structure, Links and Form

Name: _____ Class: _____ Date: _____

1. Which model offers central administration for a shared school database?

2. What is the result of an AND gate with inputs 1 and 0?

3. What is a foreign key used for?

4. Which storage type is volatile?

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

Client–server.

2. Model answer

0.

3. Model answer

Referencing a candidate key in another relation.

4. Model answer

RAM.

By the end, you can…

• Construct valid document structure using doctype, html, head, title and body.

• Select semantic elements, headings, links, labels and form fields to represent meaning.

• Explain the difference between HTML content, CSS presentation and JavaScript behaviour.

• Explain why labels, readable colour choices and character sets affect accessibility (OCR 1.5.2).

Vocabulary — know these terms

HTML — Markup language describing page content and structure.

semantic element — Tag that conveys the role of content.

attribute — Name–value metadata written inside a start tag.

form — Web element grouping controls for submission.

NEW LEARNING

Read, annotate and explain

Document structure

Head contains metadata; body contains displayed page content.

Semantic content

Heading, nav, main, section and anchor convey document meaning.

Forms and labels

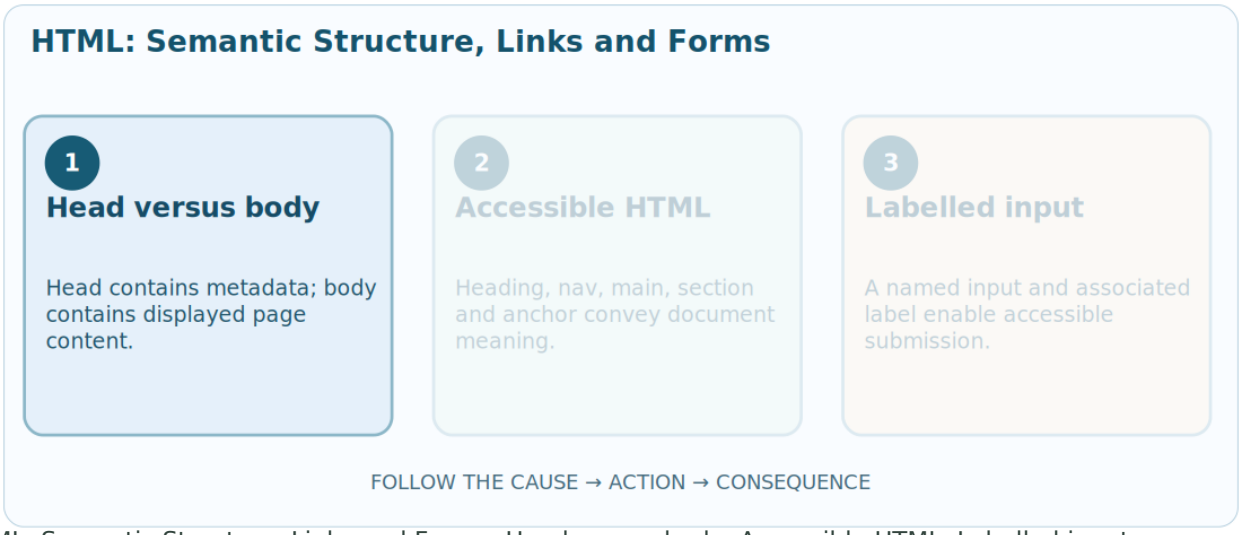

A named input and associated label enable accessible submission. UTF-8 supports a wide range of characters; CSS must not communicate meaning by red/green colour alone, and readable contrast is needed for inclusive design.

Explain one step in your own words, using the correct technical terms.

New Learning

HTML: Semantic Structure, Links and Forms: Head versus body, Accessible HTML, Labelled input

I DO — WORKED EXAMPLE

Follow the worked method

Improve a web page with a heading, a navigation link and a labelled age field.

Heading and link

Identify the facts and make an initial prediction.

Label/input association

Explain the mechanism or trace the intermediate stage.

Form submission

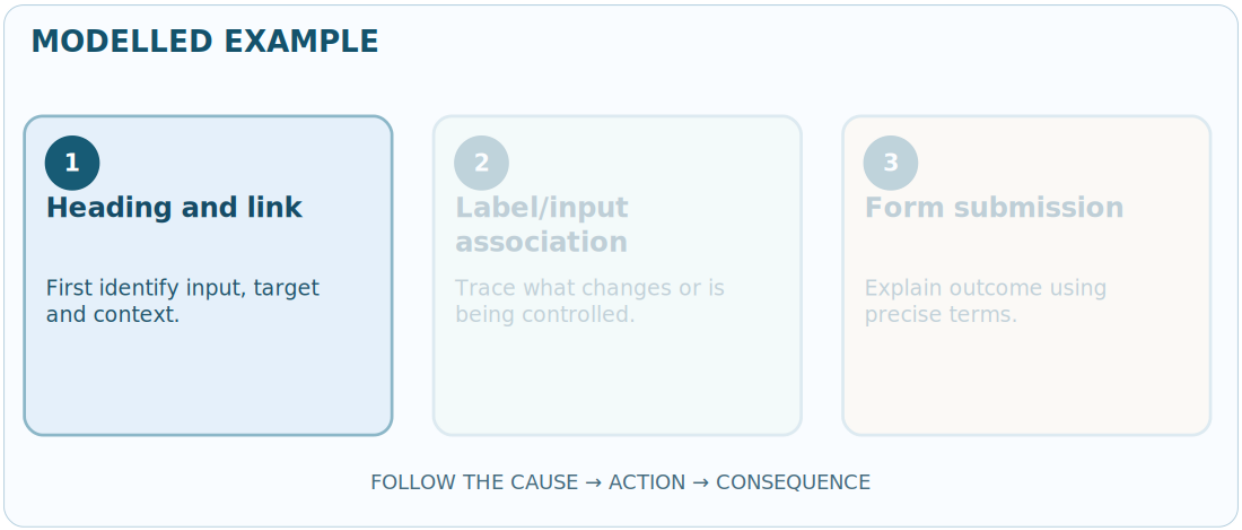

Example: <h1>Computer Science</h1> <nav>Revision</nav> <form action="/save" method="post"><label for="age">Age</label><input id="age" name="age" type="number" min="11"></form> The label's 'for' matches the input 'id'; the input's 'name' is the submitted key.

I Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Improve a web page with a heading, a navigation link and a labelled age field.

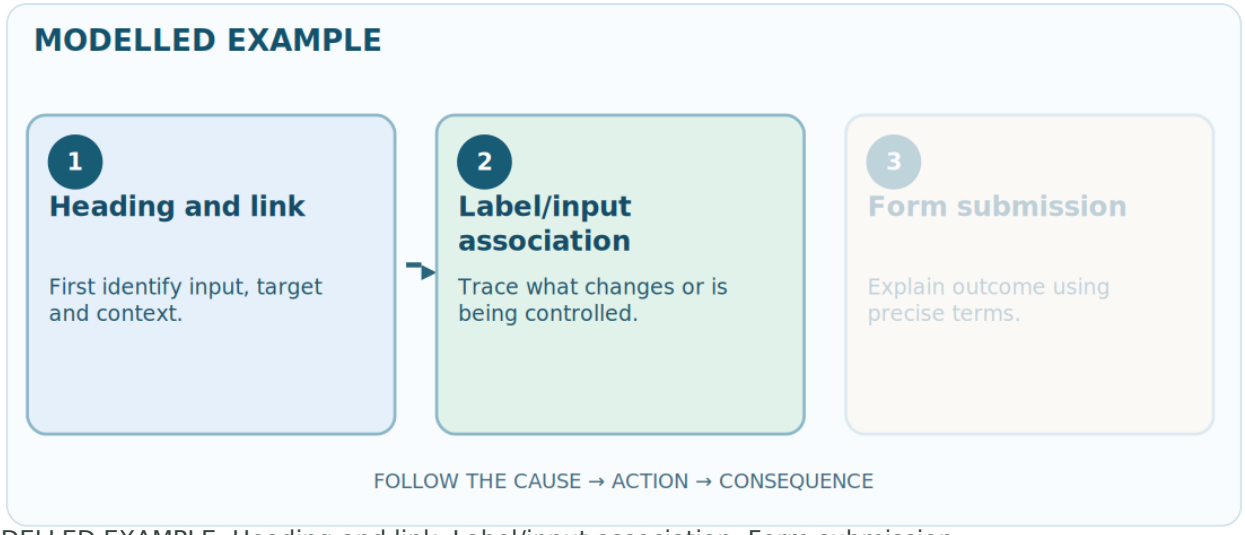

Identify the facts and make an initial prediction.

MODELLED EXAMPLE: Heading and link, Label/input association, Form submission

Improve a web page with a heading, a navigation link and a labelled age field.

Identify the facts and make an initial prediction.

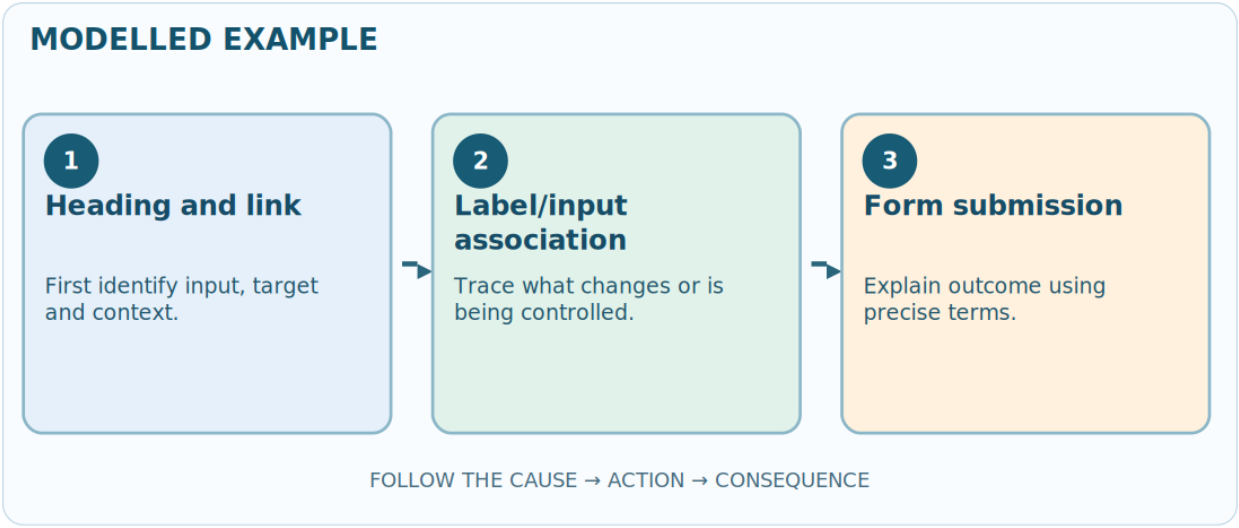

MODELLED EXAMPLE: Heading and link, Label/input association, Form submission

I Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Improve a web page with a heading, a navigation link and a labelled age field.

Identify the facts and make an initial prediction.

MODELLED EXAMPLE: Heading and link, Label/input association, Form submission

WE DO — GUIDED PRACTICE

Try → Discuss → Improve

We Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Create an accessible short survey containing a school year dropdown and submit button.

Identify the facts and make an initial prediction.

GUIDED EXAMPLE: Form and label, Select with named options, Submit control

WE DO — TRY · DISCUSS · IMPROVE

TRY: Use the original guided questions and diagrams in the preceding We Do pages. DISCUSS: Explain and challenge methods before independent practice. IMPROVE: Note one change now; compare with the source model only AFTER the Exit Ticket.

Guided 1: Form and label Identify the facts and make an initial prediction.

DISCUSS — Compare your methods. Justify one important decision, identify one difference, and agree a specific improvement.

IMPROVE — Write one precise correction or stronger explanation in your own answer.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Write suitable HTML for an h2 heading and a working hyperlink to resources.html labelled Resources. [4]

Question 2

Explain roles of head, title, main, label and input in a valid web page. [6]

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Write a small HTML form collecting a username and email address; justify semantic/accessibility choices and why server validation is still needed. [8]

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

HTML provides the semantic structure of a page, while CSS usually controls presentation.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.

We Do Check · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Create an accessible short survey containing a school year dropdown and submit button.

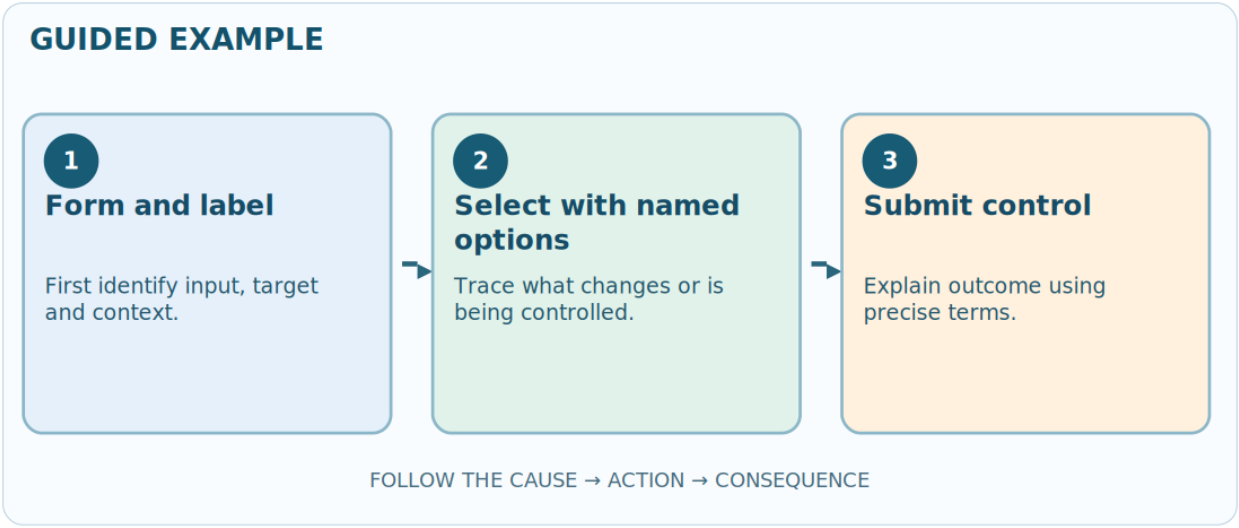

Identify the facts and make an initial prediction.

GUIDED EXAMPLE: Form and label, Select with named options, Submit control

Create an accessible short survey containing a school year dropdown and submit button.

Identify the facts and make an initial prediction.

GUIDED EXAMPLE: Form and label, Select with named options, Submit control

WE DO — SOURCE CHECK / IMPROVE

Only use this section AFTER attempting the We Do, You Do and Exit Ticket. Compare with the original classroom lesson's CHECK explanation. Correct errors in GREEN PEN and explain why.

Guided 1 — original CHECK

Select with named options

Explain the mechanism or trace the intermediate stage.

Submit control

Use <label for="year">Year group</label> and <select id="year" name="year"><option value="12">Year 12</option><option value="13">Year 13</option></select> inside a form with a submit button. Ensure distinct label/id attributes. Do not identify an invalid entry only with red colouring: add a clear written error message and sufficient text contrast.

IMPROVE: Explain one correction to your own reasoning.
