DO NOW — RECALL

Lesson 153 · Integrated Web Forms: HTML, CSS, JavaScr

Name: _____ Class: _____ Date: _____

1. Which property writes safe plain text in DOM?

2. What is a database foreign key?

3. What is the role of a router?

4. What does a cache hit mean?

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

textContent.

2. Model answer

A reference to a key in another table.

3. Model answer

Forward packets between IP networks.

4. Model answer

Required data already present in cache.

By the end, you can…

• HTML labels and input types structure a form.

• CSS and JS can give immediate, accessible feedback.

• Validate submission and permissions on trusted backend.

Vocabulary — know these terms

client-side — Execution on user device.

server-side — Execution on controlled backend.

validation — Checking input against rules.

trust boundary — Point where untrusted data enters a protected system.

NEW LEARNING

Read, annotate and explain

Capture

HTML labels and input types structure a form.

Respond

CSS and JS can give immediate, accessible feedback.

Trust the server

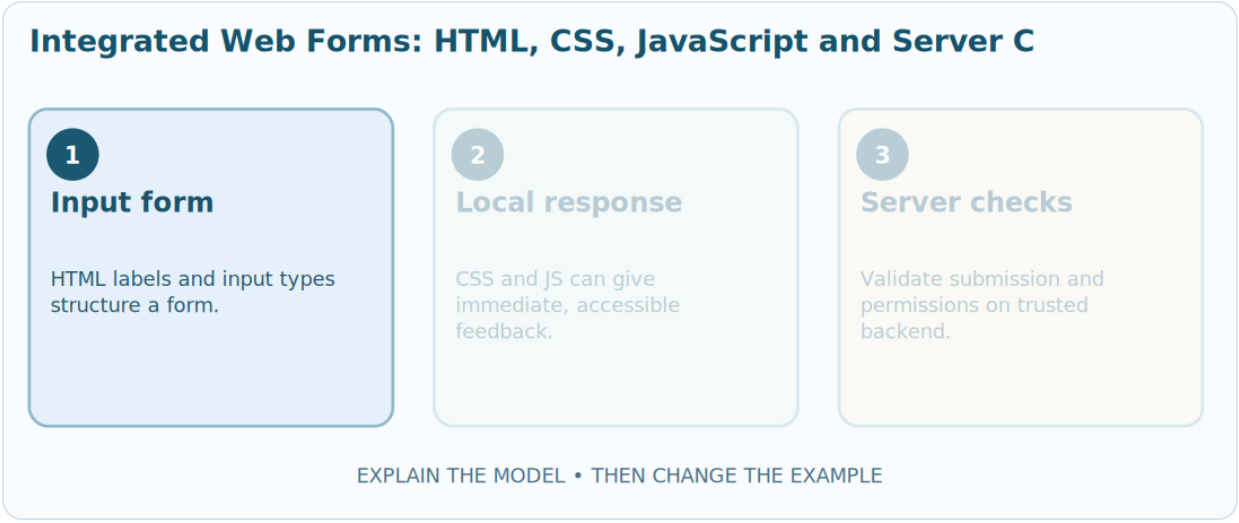

Validate submission and permissions on trusted backend.

Explain one step in your own words, using the correct technical terms.

New Learning · original lesson diagrams

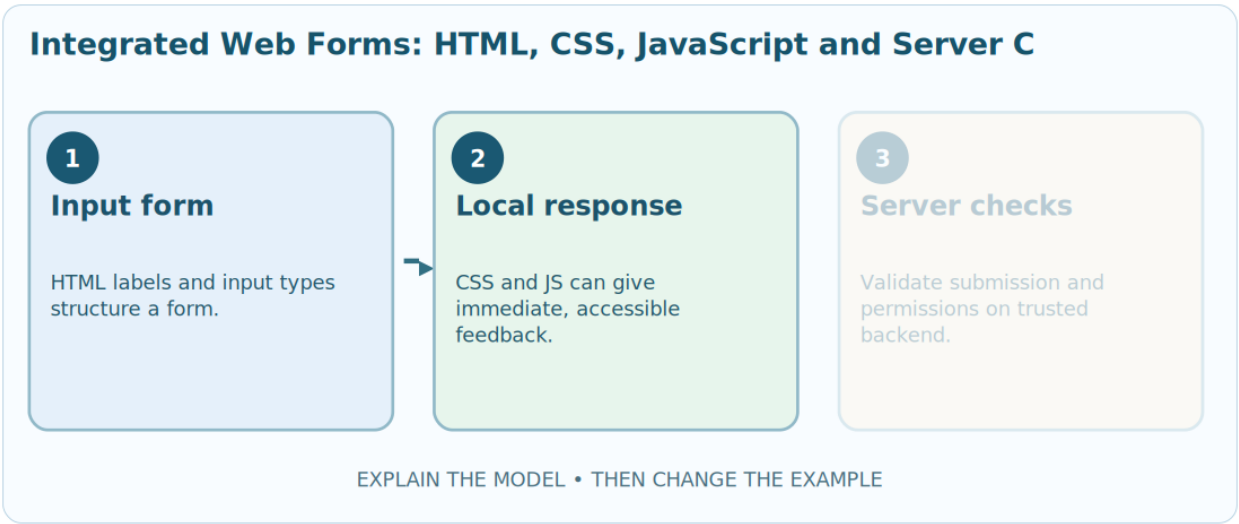

Diagrams appear after the related explanation. Annotate the original source visual.

New Learning

Integrated Web Forms: HTML, CSS, JavaScript and Server Checks: Input form, Local response, Server checks

New Learning

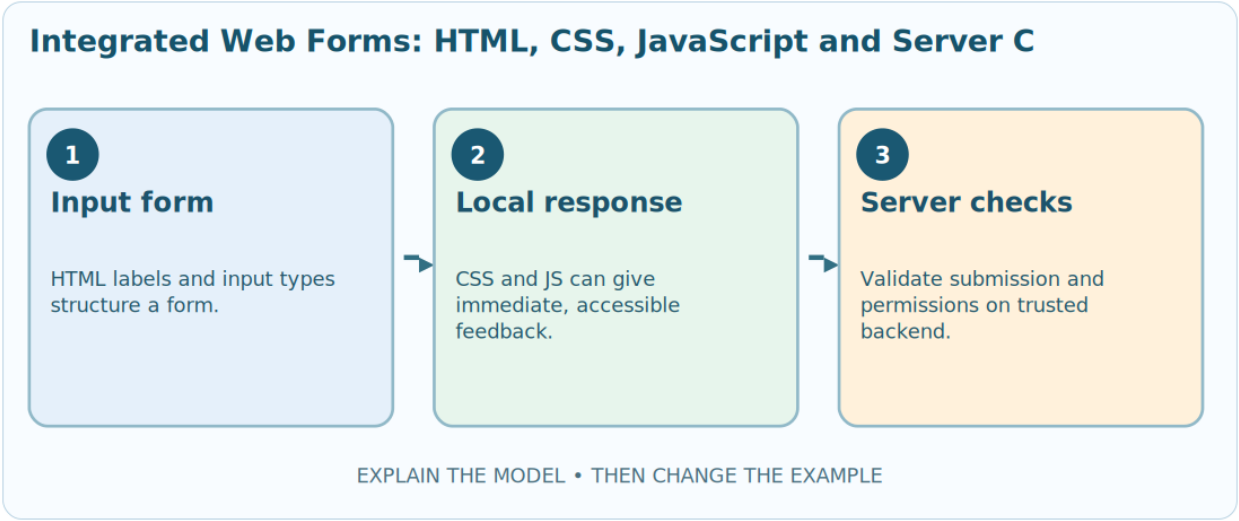

Integrated Web Forms: HTML, CSS, JavaScript and Server Checks: Input form, Local response, Server checks

New Learning

Integrated Web Forms: HTML, CSS, JavaScript and Server Checks: Input form, Local response, Server checks

I DO — WORKED EXAMPLE

Follow the worked method

An online form permits Years 12 or 13. Where must that rule be checked?

HTML accepts input

Identify the input or diagram and predict the first result.

Browser checks locally

Follow the second stage and explain its importance.

Server revalidates

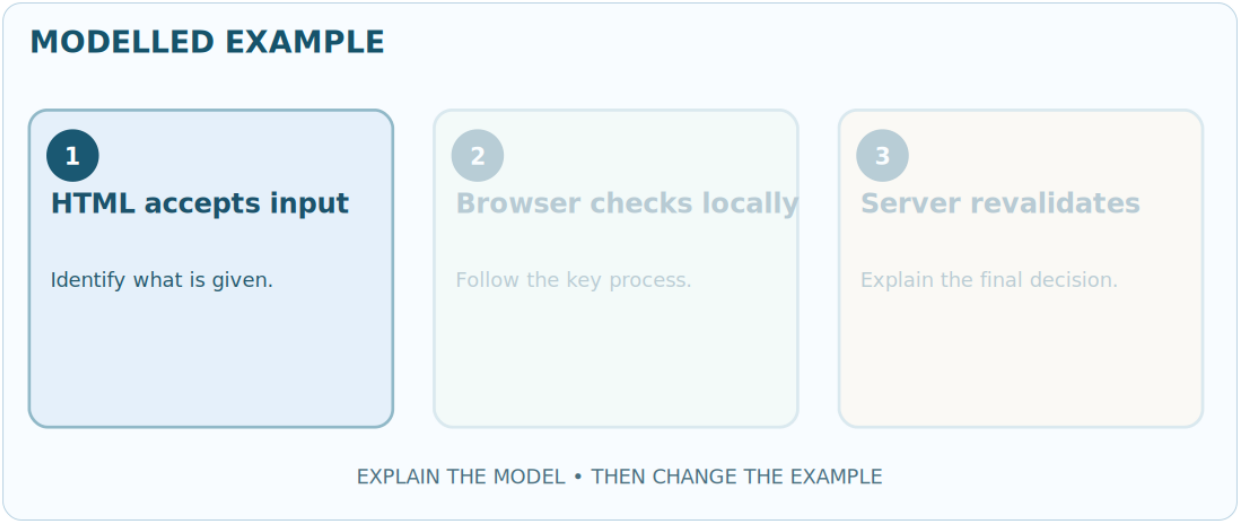

HTML min/max and JavaScript improve normal experience; the server must check the supplied value independently. Client code can be changed or bypassed; no database update should trust it.

I Do · original lesson diagrams

WE DO — GUIDED PRACTICE

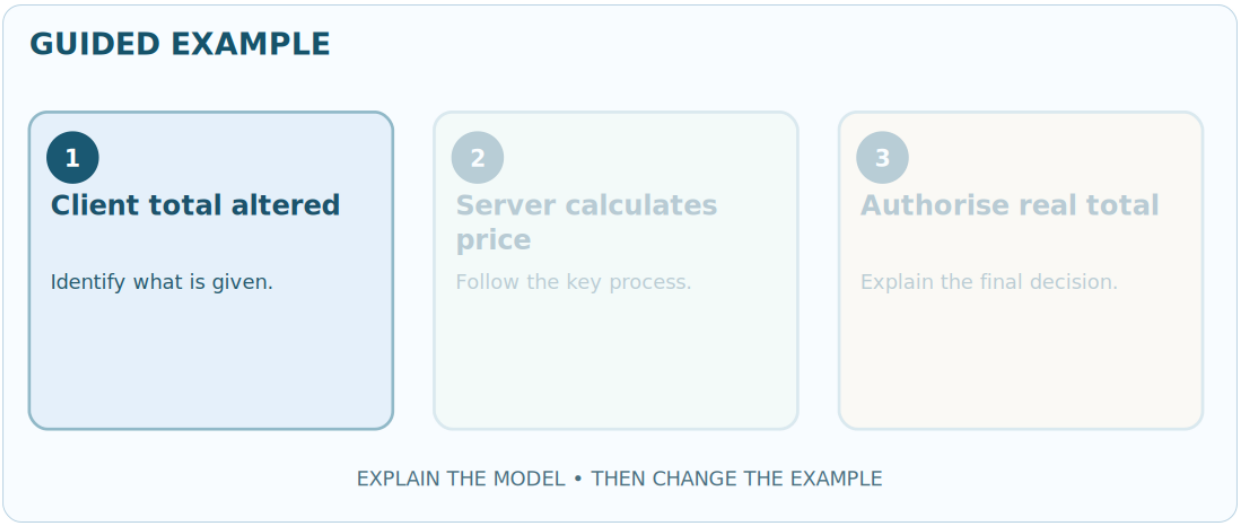

Try → Discuss → Improve

We Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

A pupil changes a visible price field before submitting checkout. How should the server protect it?

Identify the input or diagram and predict the first result.

GUIDED EXAMPLE: Client total altered, Server calculates price, Authorise real total

WE DO — TRY · DISCUSS · IMPROVE

TRY: Use the original guided questions and diagrams in the preceding We Do pages. DISCUSS: Explain and challenge methods before independent practice. IMPROVE: Note one change now; compare with the source model only AFTER the Exit Ticket.

Guided 1: Client total altered Identify the input or diagram and predict the first result.

DISCUSS — Compare your methods. Justify one important decision, identify one difference, and agree a specific improvement.

IMPROVE — Write one precise correction or stronger explanation in your own answer.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Distinguish roles of HTML, CSS and JavaScript in a form. [6]

Question 2

Explain why HTML required alone does not protect database data quality. [6]

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Design an accessible 16–19 age registration flow with client and server validation. [8]

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

A number input with min/max means a malicious client cannot submit other values.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

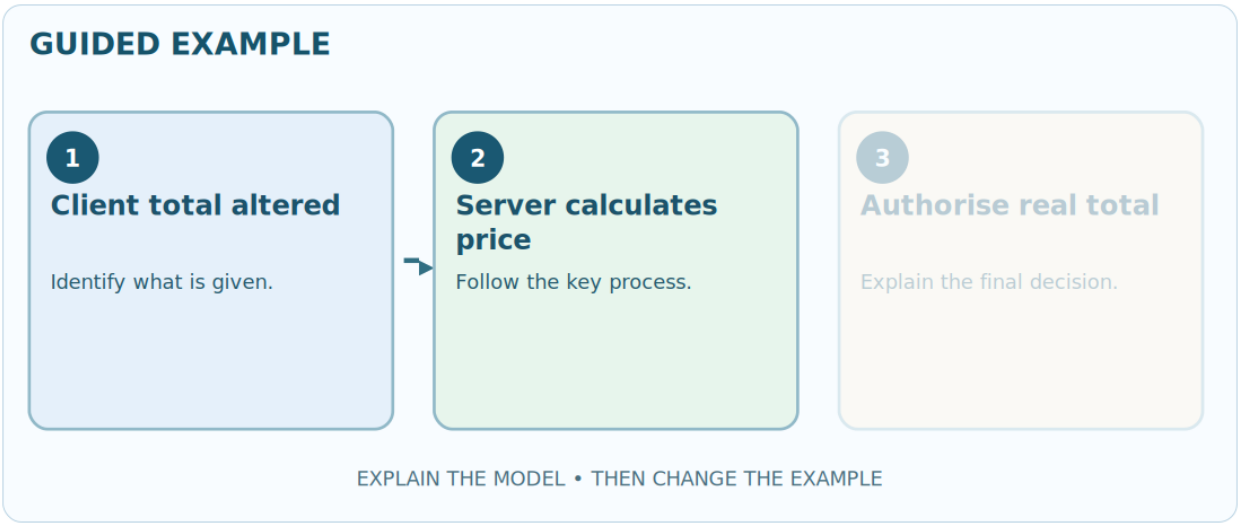

Next step: revisit the model or a relevant revision-guide section if needed.

We Do Check · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

A pupil changes a visible price field before submitting checkout. How should the server protect it?

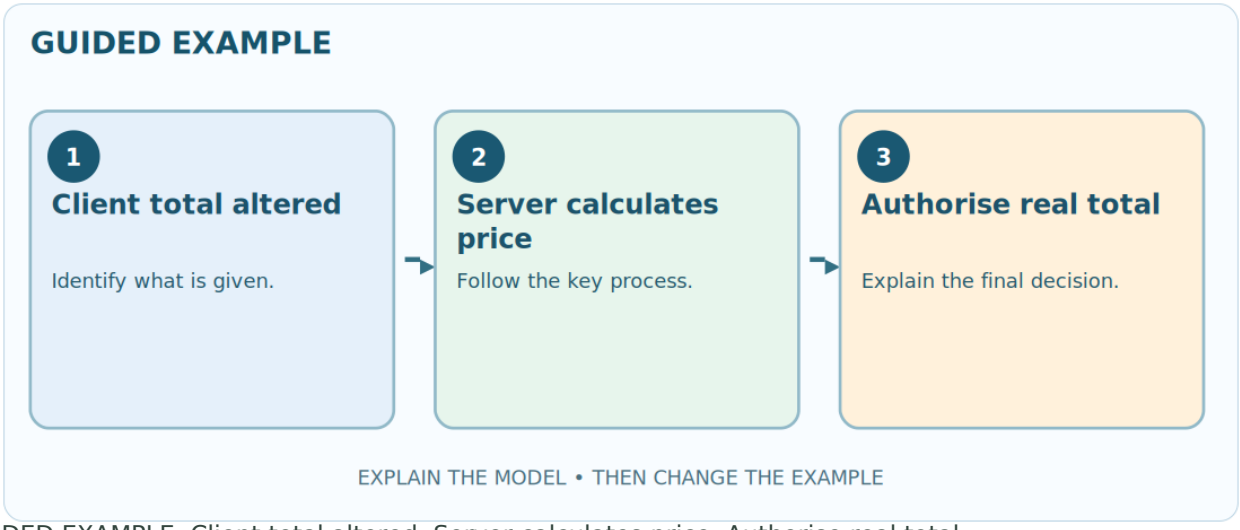

Identify the input or diagram and predict the first result.

GUIDED EXAMPLE: Client total altered, Server calculates price, Authorise real total

A pupil changes a visible price field before submitting checkout. How should the server protect it?

Identify the input or diagram and predict the first result.

GUIDED EXAMPLE: Client total altered, Server calculates price, Authorise real total

WE DO — SOURCE CHECK / IMPROVE

Only use this section AFTER attempting the We Do, You Do and Exit Ticket. Compare with the original classroom lesson's CHECK explanation. Correct errors in GREEN PEN and explain why.

Guided 1 — original CHECK

Server calculates price

Follow the second stage and explain its importance.

Authorise real total

Calculate actual price using a server-controlled catalogue, validate quantity and permissions, and use authoritative stock records; never trust a submitted total.

IMPROVE: Explain one correction to your own reasoning.
