STAFF REVIEW · H446 061 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. A simplifying rule in a model.

2. Invalid values can violate preconditions.

3. A method/module designed for use in several parts of software.

4. [2,7,0,7]. The first assignment sets a[1] to 7; the second uses that updated value, so a[2]=7-7=0.

I Do — source worked steps

1. Explain the decision — The algorithm's result can be correct mathematically but invalid under the declared application rules.

We Do — guided CHECK

1. Explain the decision
Explain caching's time/network benefit and correctness trade-off.

You Do — source mark schemes

1. Inputs count and unit price [2], numeric total [1], count non-negative [1], price non-negative [1].

2. Reused expensive lookup [2], cache read avoids recomputation [1], stale cached value [1], time-to-live or version invalidation [2].

3. Method accepts room ID [1], caches keyed room data [2], refresh on change/expiry [1], tests repeat hit and outdated room change [2].

Exit Ticket — source answer

1. False. A cached result can become stale.
