STAFF REVIEW · H446 065 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Condition required for an algorithm to work correctly.

2. Selecting relevant details and omitting irrelevant ones.

3. FIFO versus LIFO.

4. 3, 5, 4; not found. Values are 8, 12, 10. The final bounds are low=5, high=4, so the search stops.

I Do — source worked steps

1. Explain the decision — Cost is defined and connections must be valid; output stops and total fare.

We Do — guided CHECK

1. Explain the decision
An ordering rule makes fairness measurable and repeatable within the chosen model.

You Do — source mark schemes

1. Graph/start/goal [2], route algorithm evaluating costs [2], route and cost [2].

2. Alphabetical title [2], most-borrowed count [2], title lookup suits alphabetical ordering/search criterion [2].

3. Vague quality criterion [1], results limited proxy/confounding [2], relevant contextual inputs [1], risk unfair decisions [1], human judgement and wider evidence [1].

Exit Ticket — source answer

1. False. Terms and constraints must be specified.
