STAFF REVIEW · H446 070 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Statistical association, not proof of causation.

2. An estimate guiding an algorithm's next choice.

3. A quantity to minimise/maximise.

4. Five: 32→16→8→4→2→1.

I Do — source worked steps

1. Follow the reasoning — Calculate the entire feasible route rather than the next immediate edge.

We Do — guided CHECK

1. Follow the reasoning
A performance model is a simplified prediction, not a guaranteed elapsed time.

You Do — source mark schemes

1. B route10 [2], C route6 [2], choose C [1], local first-edge choice misleading [1].

2. 1200/80=15s [4]; stable throughput/no overhead or contention [2].

3. Fast estimate [1], does not model directed road restrictions [1] or congestion [1], must respect admissibility if A* optimality required [1], validate against real routes [2].

Exit Ticket — source answer

1. False. Future edge costs can reverse the choice.
