DO NOW — RECALL

Linear search: trace and code

Name: _____ Class: _____ Date: _____

1. What property must both inputs satisfy before a standard merge step?

2. What does the key represent in insertion sort?

3. What is the last index of a 5-element C# array?

4. A loop checks a[0], a[1], a[2] then returns. How many comparisons were made?

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

Each input run must already be sorted.

2. Model answer

The value being inserted into the sorted prefix.

3. Model answer

4. Indexes are 0 through 4.

4. Model answer

3 comparisons.

Vocabulary — know these terms

target — Value the search seeks.

index — Zero-based position of an array element.

sentinel — Special result such as -1 meaning not found.

early return — Leave the function as soon as a match is found.

O(n) — Search may inspect every item as input grows.

NEW LEARNING

Read, annotate and explain

Begin at index zero

Linear search examines one value at a time, in order.

Stop at the first match

When a[i] equals target, return i immediately.

No match

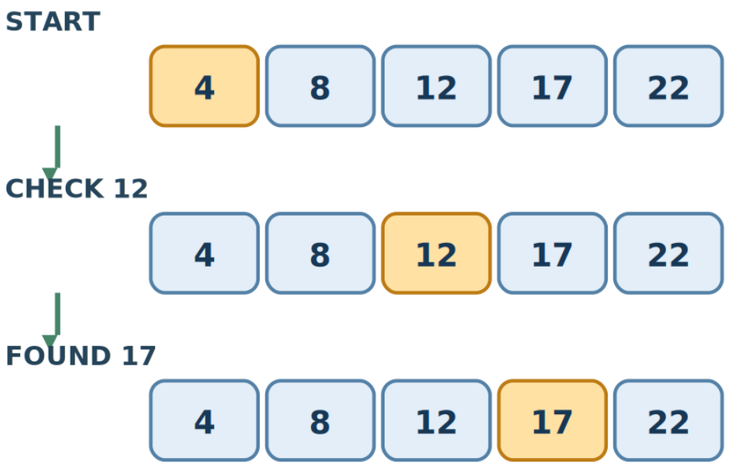

After scanning every element, return -1; no ordering assumption is needed.

Explain one step in your own words, using the correct technical terms.

New Learning · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Read the code; predict its effect

Worked algorithm states: START 4,8,12,17,22; CHECK 12 4,8,12,17,22; FOUND 17 4,8,12,17,22

WE DO — SOURCE CHECK / IMPROVE

Only use this section AFTER attempting the We Do, You Do and Exit Ticket. Compare with the original classroom lesson's CHECK explanation. Correct errors in GREEN PEN and explain why.

Guided 1 — original CHECK

Model solution

0, 1, 2, 3. Return index 3 after four comparisons.

IMPROVE: Explain one correction to your own reasoning.

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

Linear search requires sorted input.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.

I DO — WORKED EXAMPLE

Follow the worked method

Find 16 in [6,11,16,21]. Give the index and number of comparisons.

Predict first

Write visited indexes before identifying the match.

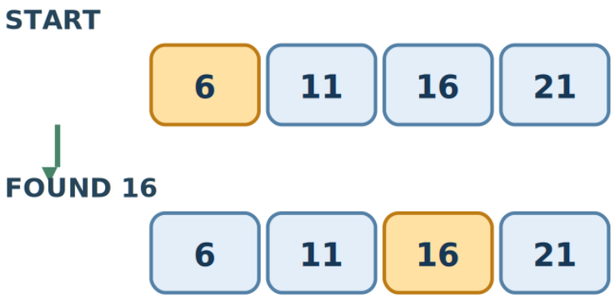

Model solution

Visit 0 (6), 1 (11), 2 (16). Return index 2 after three comparisons.

I Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Find 16 in [6,11,16,21]. Give the index and number of comparisons.

Worked algorithm states: START 6,11,16,21; FOUND 16 6,11,16,21

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Modify the function to count comparisons without returning early; explain the output for a 5-element array.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Search for 7 in [4,7,9,12]. Give index and comparison count.

Question 2

Search for 5 in [3,8,11,16]. Give return value and count.

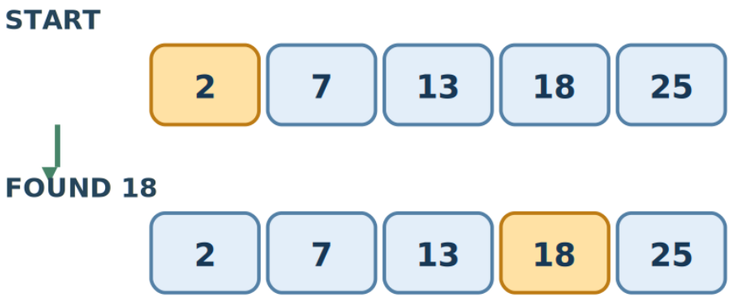

WE DO — GUIDED PRACTICE

Try → Discuss → Improve

We Do · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

Find 18 in [2,7,13,18,25].

Worked algorithm states: START 2,7,13,18,25; FOUND 18 2,7,13,18,25

WE DO — TRY · DISCUSS · IMPROVE

TRY: Use the original guided questions and diagrams in the preceding We Do pages. DISCUSS: Explain and challenge methods before independent practice. IMPROVE: Note one change now; compare with the source model only AFTER the Exit Ticket.

Guided 1: Predict first Which indexes will be visited?

DISCUSS — Compare your methods. Justify one important decision, identify one difference, and agree a specific improvement.

IMPROVE — Write one precise correction or stronger explanation in your own answer.
