DO NOW — RECALL

Environment, censorship and digital accessibility

Name: _____ Class: _____ Date: _____

1. What is a false positive in content moderation?

2. Why is Unicode used?

3. Give one environmental concern with data centres.

4. ASCII capital A is decimal 65. Encode string 'ABA' with 8 bits per character: total bits and bytes.

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

A harmless item incorrectly flagged as harmful.

2. Model answer

Represent characters from many languages and writing systems.

3. Model answer

Power use/cooling or hardware lifecycle impacts.

4. Model answer

3 characters ×8=24 bits=3 bytes (under stated simple single-byte assumption).

Vocabulary — know these terms

e-waste — Discarded electrical/electronic equipment.

censorship — Restrictions on expression/content.

accessibility — Use by people with varied needs.

contrast — Visual difference aiding readability.

Unicode — Universal character encoding repertoire.

WE DO — SOURCE CHECK / IMPROVE

Only use this section AFTER attempting the We Do, You Do and Exit Ticket. Compare with the original classroom lesson's CHECK explanation. Correct errors in GREEN PEN and explain why.

Guided 1 — original CHECK

Explain

Transparent, proportionate moderation with appeal and safeguarding escalation better balances harms and expression.

IMPROVE: Explain one correction to your own reasoning.

We Do Check · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

A school removes all comments from an online student discussion after one offensive message. Evaluate.

Blanket removal prevents harmful posts but can also silence legitimate discussion and learning.

WEDO · STEP 2; Blanket removal prevents harmful posts but can also silence legitimate discussion and learning. then Transparent, proportionate moderation with appeal and safeguarding escalation better balances harms and expression.

NEW LEARNING

Read, annotate and explain

Understand

Digital infrastructure consumes electricity and hardware resources; energy demand, device lifetimes, repairability and electronic waste are part of environmental evaluation.

Apply

Censorship and moderation can restrict harmful content, but also threaten freedom of expression and access to information. Evaluate proportionate rules, appeals and transparency.

Evaluate

Accessible design goes beyond attractive colours: sufficient contrast, structural headings, meaningful labels, keyboard access, language/character support and alternatives to colour-only cues.

Explain one step in your own words, using the correct technical terms.

New Learning · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

New Learning

Environment, censorship and digital accessibility · STAGE 1; Design choice → readable colours and labels

New Learning

Environment, censorship and digital accessibility · STAGE 2; Design choice → readable colours and labels then Character sets → language support (Unicode)

New Learning

Environment, censorship and digital accessibility · STAGE 3; Design choice → readable colours and labels then Character sets → language support (Unicode) then Moderation → safety plus free-expression trade-offs

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

A chart that uses distinct red and green colours needs no other status labels.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Evaluate both environmental and social impacts of replacing school laptops every two years instead of extending safe service life. [6]

New Learning · original lesson diagrams

Diagrams appear after the related explanation. Annotate the original source visual.

New Learning

Environment, censorship and digital accessibility · STAGE 4; Design choice → readable colours and labels then Character sets → language support (Unicode) then Moderation → safety plus free-expression trade-offs then Hardware → energy, repair, reuse and e-waste

I DO — WORKED EXAMPLE

Follow the worked method

A chart shows success only with green and failure only with red. How can you improve accessibility?

Predict first

Colour-only status is inaccessible to users with some colour-vision differences.

Explain

Add words and/or shapes alongside adequate contrast; do not rely on colour as the sole signal.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Explain three features that make a website more accessible to diverse users. [6]

Question 2

Discuss two benefits and two risks of automated content moderation on a school platform. [8]

WE DO — TRY · DISCUSS · IMPROVE

TRY: Use the original guided questions and diagrams in the preceding We Do pages. DISCUSS: Explain and challenge methods before independent practice. IMPROVE: Note one change now; compare with the source model only AFTER the Exit Ticket.

Guided 1: Predict first Blanket removal prevents harmful posts but can also silence legitimate discussion and learning.

DISCUSS — Compare your methods. Justify one important decision, identify one difference, and agree a specific improvement.

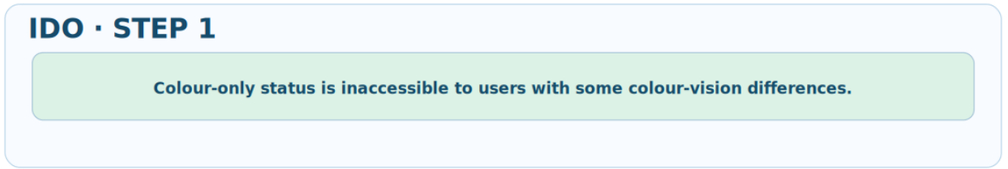

IMPROVE — Write one precise correction or stronger explanation in your own answer.

I Do · original lesson diagrams
