Q1. Retains contents without power.

Q2. Time to position/locate data for a storage access.

Q3. Light/laser.

Q4. 8 bits.

You Do pages · Independent questions

Q1. HDD magnetised platter [2], DVD laser optical disc [2], USB SSD flash electronic cells [2].

Q2. No moving parts → vibration resistance [2], fast random access [2], often higher cost/GB or write endurance trade-off [2].

Q3. Offline packs optical/removable flash depending hardware access [4]; HDD/SSD archive depending cost/speed [2]; backups and compatibility [2].

Exit Ticket · Model answer

False. HDD uses magnetic read/write heads; optical discs use lasers.

Try the question again

Choose one question you got wrong. All correct? Choose the hardest.

1. Copy the whole original question:

2. Write a complete new answer in GREEN PEN. Show working if needed:

RHS COMPUTING / OCR H446 / mixed LESSON 104 · DRAFT

I Do · Read new knowledge

Key vocabulary

magnetic — Storage via magnetisation.

optical — Storage read with laser/light.

flash — Non-volatile electronic solid-state storage.

cost per GB — Price relative to capacity.

New learning

Understand — Magnetic hard disks use magnetised regions on spinning platters with moving heads; they can offer large capacity at relatively low cost per GB.

Apply — Optical discs are read with a laser, often used for physically distributed or archived/removable media, though capacity and drive availability vary.

Evaluate — Flash uses electronic non-volatile memory cells without moving read/write parts; often faster random access and more robust to vibration than HDDs, but trade-offs remain.

Worked example

Choose portable storage for a field photographer travelling over rough ground with active projects.

1. Explain the choice — Flash SSD: no spinning platter and generally quick random access; still requires backups.

We Do · Practise with guidance

A school wants inexpensive bulk storage for a large local video archive, with separate backups.

Explain the choice

Magnetic HDD is a reasonable candidate because of capacity and cost per GB; validate resilience and transfer needs.

Question 1

Match HDD, DVD and USB SSD to magnetic, optical and flash storage, with mechanisms. [6]

Question 2

Explain one advantage and one limitation of flash SSD over magnetic HDD for a mobile video editor. [6]

Question 3

Evaluate storage choice for distributing 100 offline revision packs to pupils and for a multi-terabyte editable school video archive. [8]

Exit Ticket · Answer before checking

A hard disk drive reads bits using a laser.
