LESSON 041 · Data Protection Act 2018

Name: _____ Class: _____ Date: _____

Time: _____ Teacher: _____

Work through the pages in order. Answer in BLACK PEN first. Check in GREEN PEN only after the Exit Ticket.

Do Now · Recall previous learning

Q1. Give an environmental impact of frequent device replacement.

Q2. Which is a physical security measure?
A. A locked server room
B. A strong password
C. File compression
D. A software licence

Q3. A bitmap uses 3 bits per pixel. How many different colours are possible? If depth rises by one bit, what happens to the colour capacity?

Q4. An image is 30 × 20 pixels. Both dimensions double at the same colour depth. What happens to pixel count and raw size? Explain.

Key vocabulary

Data Protection Act 2018 — UK legislation governing the handling of personal data.

Personal data — Information relating to an identified or identifiable living person.

Data minimisation — Collecting no more personal data than needed for a stated purpose.

Lawful basis — Legitimate legal justification for processing personal information.

Data accuracy — Keeping personal information correct and up to date.

Retention — Length of time information is held.

Data security — Protecting data against unauthorised access, loss or misuse.

New learning

Why data protection law exists: The UK Data Protection Act 2018 sits alongside the UK GDPR framework and protects individuals when organisations handle personal data. Organisations must have a lawful basis for processing.

Collection and transparency: Tell people why their data is collected and use it for clear, legitimate purposes. Collect no more personal information than is necessary for that purpose.

Accuracy and retention: Keep personal data accurate and up to date where needed. Do not retain identifiable information longer than necessary for the purpose.

Security and people's rights: Apply appropriate protection, limit access and respect applicable rights to access or correct their information. A lost unencrypted device with pupil records can create a serious data-protection risk.

Worked example

A school trip form asks for a pupil's medical needs, emergency contact and favourite television programme. Explain TWO data-protection concerns. [4 marks]

1. Identify the trip's legitimate purpose: safety and communication.

2. Emergency and medical information may be necessary [1] to support safe trip management [1].

3. A favourite television programme is not relevant [1], so collecting it breaches the aim of data minimisation [1].

4. Use precise language: collect data that is necessary for a specified legitimate purpose.

BLACK PEN Answer all questions first. GREEN PEN Then: tick correct answers; rewrite mistakes.

Q3. Use a lawful purpose and tell data subjects about processing [2]. Keep information accurate, correcting known errors [2]. Store it securely through limited permissions/encryption [2]. Other appropriate duties, such as minimisation or retention limits, may be credited.

Exit Ticket · Model answer

False

Try the question again

Choose one question you got wrong. All correct? Choose the hardest.

1. Copy the whole original question:

2. Write a complete new answer in GREEN PEN. Show working if needed:

Now change to GREEN PEN. Find each original question. Tick correct answers; read the model and rewrite mistakes.

Page 1 onwards · Do Now

Q1. Manufacturing uses energy and raw materials, and disposal can add electronic waste.

Q2. A — A locked server room

Q3. 8 colours; one extra bit doubles capacity to 16.

Q4. (a) 600 pixels become 2,400. Raw size is four times larger because both dimensions double.

I Do / We Do pages · Guided practice

Q1. Personal data should not be kept longer than needed [1], so indefinite retention without a valid purpose is inappropriate [1]. The club should set a justified retention period [1] and securely delete records once no longer required [1].

Q2. The organisation must take reasonable steps to keep personal information accurate [1] and correct inaccuracies when identified [1]. An old address [1] could cause important correspondence to go to the wrong place [1].

Q3. Encrypt stored records [1], so a stolen laptop does not expose readable files without a key [1]. Restrict accounts and permissions [1], so only authorised staff can access the patient data [1].

You Do pages · Code First

```
totalFields = 5
unneededFields = 2
print(totalFields - unneededFields)
```

Expected result: 3

You Do pages · Independent questions

Q1. Regulates/protects the processing of personal data [1] and helps protect people's privacy/information rights [1].

Q2. Identify and communicate a lawful, specific purpose [1], so people know why data is collected [1]. Minimise personal information collected [1], avoiding unnecessary items such as favourite music [1].

RHS COMPUTING / OCR J277 / 1.6.1 LESSON 041 · DRAFT

BLACK PEN Answer all questions first. GREEN PEN Then: tick correct answers; rewrite mistakes.

We Do · Practise with guidance

Guided 1

A sports club stores members' home addresses indefinitely after cancellation. Explain the data-protection concern and an improvement. [4 marks]

Worked method: Personal data should not be kept longer than needed [1], so indefinite retention without a valid purpose is inappropriate [1]. The club should set a justified retention period [1] and securely delete records once no longer required [1].

Guided 2

A council website uses an out-of-date address for a resident. Explain one duty relating to data accuracy and how the error could affect the resident. [4 marks]

Worked method: The organisation must take reasonable steps to keep personal information accurate [1] and correct inaccuracies when identified [1]. An old address [1] could cause important correspondence to go to the wrong place [1].

Guided 3

A hospital stores unencrypted patient records on a shared laptop. Explain TWO ways it could improve security. [4 marks]

Worked method: Encrypt stored records [1], so a stolen laptop does not expose readable files without a key [1]. Restrict accounts and permissions [1], so only authorised staff can access the patient data [1].

BLACK PEN Answer all questions first. GREEN PEN Then: tick correct answers; rewrite mistakes.

You Do · Work independently

BLACK PEN: Write your own answers. Do not look at the Review & Improve pages yet.

Code First · Predict → Write → Test → Improve

Predict how many fields should be collected.

```
totalFields = 5
unneededFields = 2
print(totalFields - unneededFields)
```

predict

Question 1

State the overall purpose of the Data Protection Act 2018. [2 marks] Source: Original OCR J277-style teaching question; not an official OCR past paper.

Question 2

A school app requests pupils' names, emergency contacts and favourite music. Explain TWO data-protection responsibilities when collecting this information. [4 marks] Source: Original OCR J277-style teaching question; not an official OCR past paper.

Question 3

Describe THREE ways a company should protect personal data under UK data-protection requirements. [6 marks] Source: Original OCR J277-style teaching question; not an official OCR past paper.
