

Computer Systems

8.1 Lesson 1 · Do Now · Objectives

Name: _____ Class: _____

DO NOW · 5 MINUTES

1. True or false: Binary is made up of two numbers, 0 and 1.

2. What does CPU stand for?

3. What should you do if something does not feel right online?

4. From home, where does the lesson say you should go first to access Teams?

LESSON OBJECTIVES

1
2
3

Classify devices as either input or output.

Explain the difference between an input/output device and a computer system.

Identify the inputs and outputs of large computer systems such as a self-checkout system.

PRESENTATION REMINDER

Write in black or blue ink. Mark in coloured pen. Use your best handwriting. Cross out mistakes with one line. Use capital letters, punctuation and full sentences.

Four Functions

Input · Processing · Output · Storage

ALL COMPUTER SYSTEMS DO THESE FOUR THINGS

INPUT

Inputs allow the user to put data into a computer.

PROCESSING

The original lesson lists processing as one of the four functions.

OUTPUT

A computer will send data out to output devices.

STORAGE

Storage holds permanent data that will need to be used in the computer system.

WE DO · CLASSIFY

For each item, decide whether it is mainly input, output or storage.

1. Keyboard	Input / Output / Storage	_____
2. Monitor	Input / Output / Storage	_____
3. Microphone	Input / Output / Storage	_____
4. Printer	Input / Output / Storage	_____
5. USB drive	Input / Output / Storage	_____
6. Hard drive	Input / Output / Storage	_____

Flashback: some devices do all four functions. Other systems use peripherals connected to them.

Explain & Observe

Class Notebook · Video notes

YOU DO · EXPLAIN

Explain the difference between input and output devices using paragraphs. Add examples of each type in your sentences or afterwards as bullet points / a table.

My explanation:

CLASS NOTEBOOK PRESENTATION

Date each row. Write in black font. Mark in purple. Use bold or underlined titles/headings. Use subheadings or write the question in your answer.

VIDEO OBSERVATION

As you watch the video from the web lesson, note the input, output and storage devices you notice.

INPUT

OUTPUT

STORAGE

Video link is available in the web lesson and original PowerPoint.

Build a System

Label · Challenge · Exit

TASK 3 · LABEL A COMPUTER SYSTEM

Add or draw a picture of a computer system and label it. Use red for inputs, blue for storage and green for outputs.

Draw / attach your system here

Label inputs, outputs and storage

CHALLENGE

Try a more complex system such as an ECG machine in a hospital, the inside of a car or the inside of a plane.

EXIT REFLECTION

Tick one: ☐ Ready ☐ Nearly there ☐ Need help

One thing I can now identify or explain:

One thing I still need help with:
