DO NOW — RECALL

SQL INSERT, DELETE, DROP and LIKE

Name: _____ Class: _____ Date: _____

1. What does a primary key enforce?

2. What does SELECT * mean?

3. What is a foreign key used for?

4. Simplify A ∨ (¬A ∧ B) using a Boolean identity.

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

Uniqueness of row identifier.

2. Model answer

Return all columns.

3. Model answer

Links a row to a related key.

4. Model answer

$A \vee (\neg A \wedge B) = (A \vee \neg A) \wedge (A \vee B) = 1 \wedge (A \vee B) = A \vee B$.

Vocabulary — know these terms

INSERT — Add records.

DELETE — Remove matching records.

DROP TABLE — Remove table definition/data.

LIKE — Pattern matching.

% — Zero or more characters in LIKE.

NEW LEARNING

Read, annotate and explain

Understand

INSERT adds a row; DELETE removes records matching a WHERE predicate. Omitting WHERE can delete every row.

Trace

DROP TABLE removes the table itself, not just one record. It is a destructive schema operation.

Explain

LIKE uses % for any number of characters and _ for a single character in standard SQL. SELECT * means all columns, a different use of *.

Explain one step in your own words, using the correct technical terms.

I DO — WORKED EXAMPLE

Follow the worked method

How would you remove only Student ID=8 without dropping the table?

Predict

DELETE with a key-based WHERE targets that record

Check the answer

DROP TABLE would remove the entire table.

WE DO — GUIDED PRACTICE

Try → Discuss → Improve

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Give correct SQL to add a row (7,'Elena') to Student(ID,Name). [4]

Question 2

Explain DELETE FROM Student without WHERE, and write a safer deletion for ID=7. [6]

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Explain difference between SELECT *, LIKE 'A%' and DROP TABLE. Give a use and consequence of each. [6]

EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

An SQL LIKE pattern uses * to mean any sequence of characters.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.
