EXIT TICKET / REFLECTION

Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

A client-side HTML required field makes server-side validation unnecessary.

How confident are you? Circle one: Confident / Getting there / Need help

Explain your choice, identifying one concept you can now use independently.

GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.

DO NOW — RECALL

Databases, SQL and web code practice

Name: _____ Class: _____ Date: _____

1. What does INNER JOIN require?

2. What is a foreign key?

3. How does label for connect to input?

4. Zero-indexed 4×3 array: total values and last index pair.

DO NOW — CHECK / OBJECTIVES

Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

1. Model answer

Join condition matching rows.

2. Model answer

Field referencing key in a related table.

3. Model answer

It matches the input id attribute.

4. Model answer

12 values, last index (3,2).

By the end, you can…

- A primary key identifies rows; a foreign key creates the relationship across tables.
- An INNER JOIN returns matching rows; a WHERE clause then filters them.
- HTML structures user forms, CSS styles them, and JS can respond to events. Server-side checks remain authoritative.

Vocabulary — know these terms

join — Match rows across tables.

foreign key — Key relationship across tables.

label — Accessible form control description.

textContent — DOM text-setting property.

YOU DO — INDEPENDENT PRACTICE

Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 3

Explain why a form's browser validation cannot be the sole protection for a school database, including one safe server procedure. [6]

YOU DO — INDEPENDENT PRACTICE

Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

Question 1

Trace SQL JOIN and WHERE in the lesson example; identify final row and excluded rows. [6]

Question 2

Write SQL selecting names with marks≥70 using the two-table design. [6]

NEW LEARNING

Read, annotate and explain

Understand

A primary key identifies rows; a foreign key creates the relationship across tables.

Apply

An INNER JOIN returns matching rows; a WHERE clause then filters them.

Evaluate

HTML structures user forms, CSS styles them, and JS can respond to events. Server-side checks remain authoritative.

Explain one step in your own words, using the correct technical terms.

I DO — WORKED EXAMPLE

Follow the worked method

Write a form label correctly associated with email input.

Predict first

Matching for and id improves accessibility, while name defines the submitted field.

Explain and check

Explain the reason for the result.
