BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Paper 1: Weakest Topics

Name _____ **Class** _____ **Date** _____ **Time** _____ **Teacher** _____

Do Now - Four retrieval questions

BLACK PEN: answer four questions before checking the answers.

1. When tracing a loop, should you check its final permitted iteration?

2. What is an IDE's editor used for?

A) Fixing physical CPU faults
B) Writing source code
C) Managing user access rights
D) Defragmenting a hard drive

3. Draw the standard AND gate symbol, label its input(s) and output, and give one input-output example.

4. Either of two sensors can trigger an output. "An OR gate is a rectangle with a memory address inside." Correct this. Describe the right symbol and why it matters.

Today's objectives

Explain the core ideas of paper 1: weakest topics using accurate OCR terminology. Apply a clear method to the worked and guided questions.

Key vocabulary - Read, cover, recall

Target weak points
Use assessed evidence to select a small number of topics, not indiscriminate revision.

Retrieve independently
Attempt a new problem without notes first.

Fix root causes
Decide whether error arose from knowledge, calculation, interpretation or timing.

Repeat at interval
Reattempt a similar question after a delay to check retention.

Write one key term and its meaning in your own words:

Do Now	I Do	We Do	You Do	Review & Improve
Recall previous learning	Read new knowledge	Practise with guidance	Work independently	Check my understanding

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Learn and practise

New learning - Key ideas

Target weak points	Use assessed evidence to select a small number of topics, not indiscriminate revision.
Retrieve independently	Attempt a new problem without notes first.
Fix root causes	Decide whether error arose from knowledge, calculation, interpretation or timing.
Repeat at interval	Reattempt a similar question after a delay to check retention.

I Do - One worked example

An image-size answer forgot to convert bits to bytes. Correct it for 10 x 20 pixels at 8 bits/pixel.

1. Compute 10 x 20=200 pixels.
2. Multiply by 8=1600 bits.
3. Divide by 8=200 bytes.
4. Label both quantities and indicate why the original answer was wrong.

We Do - Guided questions

BLACK PEN: use the model, then explain your answer.

1. A student writes 'WAN is always wireless'. Improve.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Think and write

Code First - Predict > Write > Test > Improve

YOUR TASK: Write the missing operator to convert 968 bits into full bytes.

```
bits = 968
bytes = bits ... 8
print(bytes)
```

BLACK PEN: predict or complete the code; test, then improve.

For extended answers, continue on lined paper if needed.

You Do - Independent exam questions

Q2. Why might 'faster' alone fail a CPU-performance explanation? [2 marks]

Q3. A 100 x 100 image at 1 bit/pixel has how many bits? [2 marks]

Q4. Explain how spaced retrieval can improve examination readiness. [2 marks]

Exit Ticket - True or False?

Circle T or F before reviewing Page 4.

1. Identifying the original cause of an error supports targeted revision. ☐ T ☐ F
2. Use assessed evidence to select a small number of topics, not indiscriminate revision. ☐ T ☐ F
3. Attempt a new problem without notes first. ☐ T ☐ F

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick correct answers; rewrite mistakes.

Review & improve

GREEN PEN: tick correct marking points, then correct errors.

Choose your hardest question to rewrite in full below.

Do Now - Answers

Q1 Yes; omitting it can change the final variable values or output. ☐

Q2 B - Writing source code ☐

Q3 Flat input edge; rounded output edge. Usually two inputs and one output. Example: 1 AND 0 = 0. ☐

Q4 Curved input edge; pointed, curved output edge. Usually two inputs. Check the symbol before applying the gate's rule. ☐

Code First - Model

```
bits = 968
bytes = bits DIV 8
print(bytes)
```

Output: 121

We Do - Check the model

1. State correct definition clearly. ☐

Exit Ticket - Check

1. TRUE 2. TRUE 3. TRUE

You Do - Self-mark

Q2 It lacks a mechanism such as reduced cache misses or more parallel independent tasks. ☐

Q3 10,000 bits. ☐

Q4 Repeated recall after intervals helps identify and strengthen knowledge that is not yet secure. ☐

Try the question again

1. Copy the FULL question you found most difficult:

2. In GREEN PEN, write a complete new answer:
