EXIT TICKET / REFLECTION

## Check your understanding

Complete the actual lesson Exit Ticket before checking the answer.

**A number input with min/max means a malicious client cannot submit other values.**

**How confident are you? Circle one: Confident / Getting there / Need help**

Explain your choice, identifying one concept you can now use independently.

### GREEN PEN — Correct and explain

Choose one mistake from your independent work. Write the correct method and explain precisely why your original answer was wrong.

Next step: revisit the model or a relevant revision-guide section if needed.

DO NOW — RECALL

## Lesson 153 · Integrated Web Forms: HTML, CSS, JavaScr

Name: _____ Class: _____ Date: _____

**1. Which property writes safe plain text in DOM?**

**2. What is a database foreign key?**

**3. What is the role of a router?**

**4. What does a cache hit mean?**

DO NOW — CHECK / OBJECTIVES

# Correct and improve

Check page 1 in GREEN PEN. Write corrections in full.

### 1. Model answer

textContent.

### 2. Model answer

A reference to a key in another table.

### 3. Model answer

Forward packets between IP networks.

### 4. Model answer

Required data already present in cache.

### By the end, you can…

• HTML labels and input types structure a form.

• CSS and JS can give immediate, accessible feedback.

• Validate submission and permissions on trusted backend.

### Vocabulary — know these terms

client-side — Execution on user device.

server-side — Execution on controlled backend.

validation — Checking input against rules.

trust boundary — Point where untrusted data enters a protected system.

YOU DO — INDEPENDENT PRACTICE

# Questions · Part 2

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

### Question 3

Design an accessible 16–19 age registration flow with client and server validation. [8]

YOU DO — INDEPENDENT PRACTICE

# Questions · Part 1

Answer independently. Show code, calculations, a trace or justified reasoning as appropriate.

### Question 1

Distinguish roles of HTML, CSS and JavaScript in a form. [6]

### Question 2

Explain why HTML required alone does not protect database data quality. [6]

NEW LEARNING

# Read, annotate and explain

### Capture

HTML labels and input types structure a form.

### Respond

CSS and JS can give immediate, accessible feedback.

### Trust the server

Validate submission and permissions on trusted backend.

**Explain one step in your own words, using the correct technical terms.**

I DO — WORKED EXAMPLE

# Follow the worked method

### An online form permits Years 12 or 13. Where must that rule be checked?

### HTML accepts input

Identify the input or diagram and predict the first result.

### Browser checks locally

Follow the second stage and explain its importance.

### Server revalidates

HTML min/max and JavaScript improve normal experience; the server must check the supplied value independently. Client code can be changed or bypassed; no database update should trust it.

WE DO — GUIDED PRACTICE

# Try → Discuss → Improve
