Do Now · retrieval
CSS and JavaScript

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

What does the HTML id attribute identify?

Q2

What does a CSS selector do?

Q3

What does a button click trigger in JavaScript?

Q4

Binary search in [2,4,6,8,10,12,14] for 12: show midpoint indices.

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Understand — CSS controls presentation using selectors and declarations; `#status` targets one element by id.

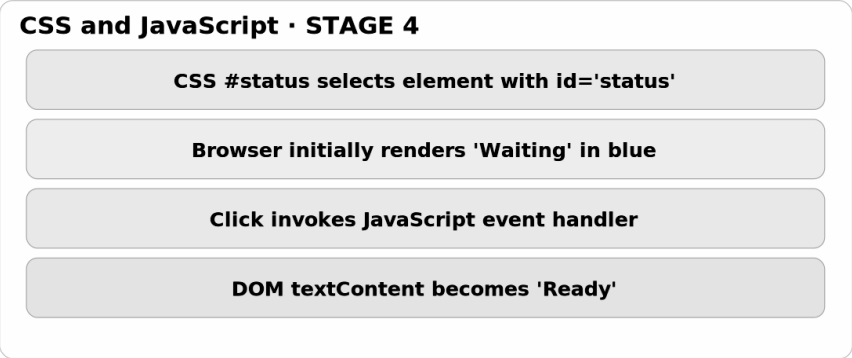

Core idea 2

Trace — JavaScript can react to browser events and modify the DOM. The handler does not execute until a click event occurs.

Core idea 3

Evaluate — The document's structure remains HTML, styles remain CSS, and interactive behaviour is JavaScript. Validate incoming data on the server even if scripts check it first.

Key visual · complete concept

Annotate the key visual

Explain which labels or features show the main process.

New Learning · applying the ideas

Vocabulary · use the correct technical terms

CSS — Style sheets controlling presentation.

selector — Targets HTML/DOM nodes.

DOM — Browser's document object model.

event handler — Code invoked by event.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

Problem

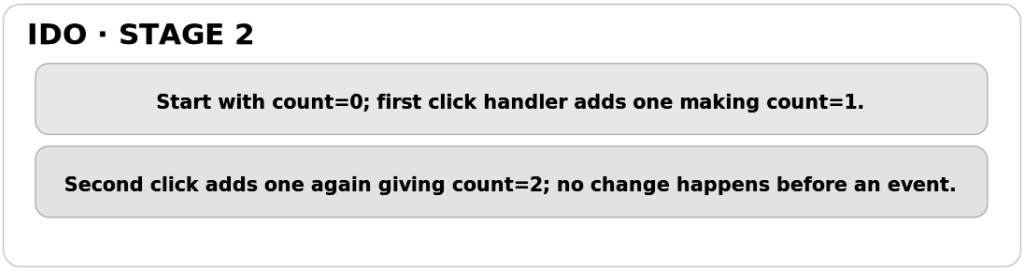

Trace click count initial 0 when handler increments by one on each click. Two clicks occur.

Follow the worked method

1. Predict first — Start with count=0; first click handler adds one making count=1.

2. Show method — Second click adds one again giving count=2; no change happens before an event.

Source model · final illustrated step

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Predict first
getElementById selects the existing paragraph whose id is 'msg'.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

In the code, what does CSS #status apply and what is initial text? [4]

Question 2

Write JavaScript so a click on button id='go' changes p id='status' to 'Complete'. [6]

Check that you have used the technical terms and explained your decisions.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

Compare changing text with textContent and inserting untrusted input via innerHTML. [6]

Check that you have used the technical terms and explained your decisions.

Exit Ticket · reflect and retrieve

Exit Ticket

JavaScript is needed to define every HTML heading and paragraph.

Use key vocabulary from memory

1. Explain CSS in your own words.

2. Explain selector in your own words.

3. Explain DOM in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.
