STAFF REVIEW · H446 293 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Name/value fields to a server using a chosen HTTP method.

2. Changes text in a DOM node without parsing it as HTML.

3. Encodes it as query parameters in the request URL.

4. 12 cells; last index pair (2,3).

I Do — source worked steps

1. Predict first — An attacker can skip the browser form and send a request containing quantity=1000.

2. Explain — The server must enforce actual constraints; browser checks are useful but only improve convenience.

We Do — guided CHECK

1. Predict first
The browser can preview or resize an image to reduce traffic and improve usability.
Explain
The server verifies authorisation, validates the uploaded bytes and applies safe storage rules.

You Do — source mark schemes

1. Browser offers fast feedback [2], can be bypassed [1]; server enforces authoritative rules [2], and may add network round-trip latency [1].

2. Authentication/authorisation [2], stock update [1], secure payment integration [1], transaction/integrity [1], server-side validation [1].

3. Client keyboard/visual feedback [1], client input checks [1], server stores progress [1], authenticates users [1], safeguards private results [1], trade-offs connectivity/load [1].

Exit Ticket — source answer

1. False. Server validation is always necessary.
