STAFF REVIEW · H446 299 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Identifying meaningful patterns in datasets.

2. Value unusually distant from the rest.

3. Scatter graph.

4. [4,4,12,8], total 28.

I Do — source worked steps

1. Predict first — As x increases, y increases in this small sample, indicating positive association.

2. Explain the method — No causal claim is justified without additional evidence or experimental design.

We Do — guided CHECK

1. Predict first
A box plot or ordered dot plot shows the unusually high score 90 clearly.
Explain the method
The mean 54.25 is pulled upwards by the outlier; median 43.5 better describes the centre of the lower cluster.

You Do — source mark schemes

1. Bar chart categories [2]; scatter chart paired numeric measurements [2]; histogram of intervals [2].

2. Sum217 [1], mean54.25 [1]; ordered middle42,45 [1], median43.5 [1]; 90 is an outlier [1]; mean may hide clustering [1].

3. Purpose/legal necessity [1], minimise personal data [1], accuracy and confounding [1], fairness/bias [1], secure access [1], human interpretation rather than causal certainty [1].

Exit Ticket — source answer

1. False. Confounding or coincidence can explain association.
