STAFF REVIEW · H446 300 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. A rule-of-thumb estimate useful for choosing or ordering options.

2. Completed work per unit time.

3. Delay caused by unavailable stage/result or resource.

4. mid7, then mid11, then mid13; found at 13.

I Do — source worked steps

1. Predict first — Calculate complete route costs, rather than deciding only from the first edge.

2. Explain the method — The via-C path is cheaper at six total units despite a larger first edge.

We Do — guided CHECK

1. Predict first
Task one occupies S1 in cycle 1, with one new task entering each later cycle.
Explain the method
Task four completes stage S3 in cycle 6, assuming no stalls; it is not completed in cycle 4.

You Do — source mark schemes

1. Local choice ignores later costs [2]; example via B 2+8=10 vs C 5+1=6 [2].

2. One starts each cycle [2], pipeline fill3 [1], last completes cycle3+5−1=7 [2], non-overlap=15 [1].

3. Heuristic can direct search [1], must not overestimate for optimality under appropriate assumptions [1]; live network weights may change [1]; model validation/data quality [1], congestion/resources [1], compare quality and computation time [1].

Exit Ticket — source answer

1. False. Later costs can reverse the choice.
