STAFF REVIEW · H446 303 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Five items are indexed 0–4.

2. Parameter passing allowing modification of caller's underlying variable.

3. Next line of text from a file.

4. a[2]=5; total=17.

I Do — source worked steps

1. Predict first — Array declaration creates three positions: indexes 0,1,2.

2. Check reasoning — scores[1] holds 4, so output is 4.

We Do — guided CHECK

1. Predict first
The parameter is passed by reference, so assignment to x changes the caller's n.
Check reasoning
After addOne(n), n=7 and print displays 7.

You Do — source mark schemes

1. Outputs 12 [2]; valid indexes are 0, 1 and 2 [2]; a[3] is out of range [1].

2. Marking: openRead with the correct filename [2]; loop until endOfFile() [2]; readLine() and print each line [2]; close the loop and file [1].
CODE:

```
f = openRead("scores.txt")
while NOT f.endOfFile()
print(f.readLine())
endwhile
f.close()
```

3. byVal called with n=5 uses copy and n remains5 [3]; byRef updates n to7 [3].

Exit Ticket — source answer

1. False. Valid positions are 0–3.
