Exit Ticket · reflect and retrieve

Exit Ticket

A client-side HTML required field makes server-side validation unnecessary.

Use key vocabulary from memory

1. Explain join in your own words.

2. Explain foreign key in your own words.

3. Explain label in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.

RHS COMPUTING / OCR H446 / LESSON 314 DRAFT · TEACHER REVIEW

Do Now · retrieval

Databases, SQL and web code practice

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

What does INNER JOIN require?

Q2

What is a foreign key?

Q3

How does label for connect to input?

Q4

Zero-indexed 4×3 array: total values and last index pair.

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Understand — A primary key identifies rows; a foreign key creates the relationship across tables.

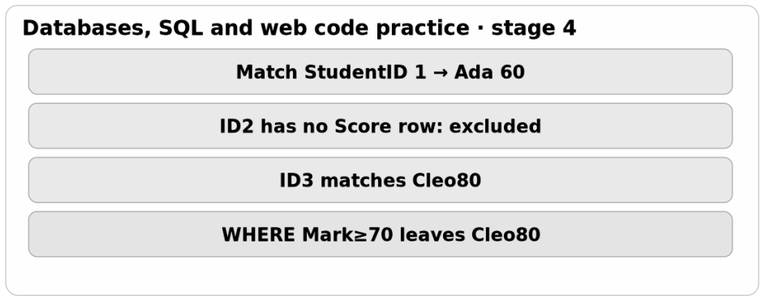

Core idea 2

Apply — An INNER JOIN returns matching rows; a WHERE clause then filters them.

Core idea 3

Evaluate — HTML structures user forms, CSS styles them, and JS can respond to events. Server-side checks remain authoritative.

Key visual · complete concept

Annotate the key visual

Explain which labels or features show the main process.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

Explain why a form's browser validation cannot be the sole protection for a school database, including one safe server procedure. [6]

Check that you have used the technical terms and explained your decisions.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

Trace SQL JOIN and WHERE in the lesson example; identify final row and excluded rows. [6]

Question 2

Write SQL selecting names with marks≥70 using the two-table design. [6]

Check that you have used the technical terms and explained your decisions.

New Learning · applying the ideas

Vocabulary · use the correct technical terms

join — Match rows across tables.

foreign key — Key relationship across tables.

label — Accessible form control description.

textContent — DOM text-setting property.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

Problem

Write a form label correctly associated with email input.

Follow the worked method

1. Predict first — Matching for and id improves accessibility, while name defines the submitted field.
2. Explain and check — Explain the reason for the result.

Source model · final illustrated step

IDO · stage 2

Matching for and id improves accessibility, while name defines the submitted field.

Explain the reason for the result.

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Predict first
textContent inserts safe text without parsing markup.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.
