STAFF REVIEW · H446 191 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. 4. The local variable shadows the field.

2. The condition that stops further recursive calls.

3. 8, because arrays start at index zero.

4. 2, 4, 8.

I Do — source worked steps

1. Predict first — The argument 50 becomes local parameter price = 50.

2. Model the result — Integer division 50 / 5 = 10; the returned value is 60.

We Do — guided CHECK

1. Predict first
The argument 4 is assigned to n.
Model the result
3 × 4 + 1 = 13, so the method returns 13 and prints 13.

You Do — source mark schemes

1. 25.

2. static bool IsEven(int n) { return n % 2 == 0; }

3. The int return type requires an int result. Use static void Show(int x) { Console.WriteLine(x); } or return x and print at the call site.

Exit Ticket — source answer

1. False. A void method does not return a result.
