BLACK PEN Answer all questions first. **GREEN PEN** Then: tick and rewrite mistakes.

LESSON 271 · Applications, utilities and source licensing

Name: _____ Class: _____ Date: _____

Work through the pages in order. Answer in BLACK PEN first. Check in GREEN PEN only after the Exit Ticket.

Do Now · Recall previous learning

Q1. What is a hypervisor?

Q2. Why is a driver required?

Q3. Define a utility.

Q4. Full adder inputs 1,1,1: what are sum and carry-out?

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick and rewrite mistakes.

I Do · Read new knowledge

Key vocabulary

application — End-user task software.

utility — System-management program.

open-source — Qualifying source-available licence.

licence — Conditions for use and distribution.

New learning

Understand — Application software provides end-user capabilities; utilities perform system maintenance, protection or management.

Trace — Open-source means qualifying licences grant rights to inspect, change and redistribute source code under terms.

Evaluate — Proprietary licensing can restrict modification. Compare cost, support, compatibility, accessibility and staff skills.

Worked example

Select software to write a report and protect copies.

1. Predict first — A user task and system-protection task call for different software classes.

2. Model and check — Explain why each value follows from the earlier step.

We Do · Practise with guidance

School compares open-source and proprietary databases. What matters beyond price?

```
Evaluate support, interoperability, security maintenance, expertise.
```

Predict first

The licence fee alone does not capture staff training, integration and upgrade costs.

Model and check

Explain why each value follows from the earlier step.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick and rewrite mistakes.

You Do · Work independently

BLACK PEN: Write your own answers. Do not look at the Review & Improve pages yet.

Question 1

Classify spreadsheet, backup, photo editor and disk cleanup. [4]

Question 2

Compare open and closed-source distribution and give one benefit of each. [6]

Question 3

Evaluate changing school software from proprietary to open-source. [6]

Exit Ticket · Answer before checking

Source code posted online automatically gives unrestricted modification rights.

BLACK PEN Answer all questions first. **GREEN PEN** Then: tick and rewrite mistakes.

Review & Improve · GREEN PEN

Now change to GREEN PEN. Find each original question. Tick correct answers; read the model and rewrite mistakes.

Page 1 onwards · Do Now

Q1. Manages guest VMs.

Q2. Provides OS-to-hardware interface.

Q3. Software that maintains, protects or manages the system.

Q4. 1+1+1=3=11_2, hence sum1, carry1.

You Do pages · Independent questions

Q1. Application, utility, application, utility [1 each].

Q2. Open-source has source and modification/redistribution rights [2]; proprietary often restricts source [2]; customisation [1]; commercial support possible [1].

Q3. Licence [1], support [1], file-format interoperability [1], training [1], accessibility/security [1], migration risk [1].

Exit Ticket · Model answer

False. Licence permissions determine those rights.

Try the question again

Choose one question you got wrong. All correct? Choose the hardest.

1. Copy the whole original question:

2. Write a complete new answer in GREEN PEN. Show working if needed:
