STAFF REVIEW · H446 237 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. It reads a[0] as its starting value.

2. Previously working functionality fails after a change.

3. Defines behaviour for objects of that class.

4. An integration test of the database interaction.

I Do — source worked steps

1. Predict first — TotalCalculator already gives correct values; the failure appears when OrderService interacts with the database.

2. Model and explain — Prioritise an integration test of saving, then a system-level end-to-end checkout test.

We Do — guided CHECK

1. Predict first
The isolated search passes, so check the connection that maps returned IDs to displayed titles.
Model and explain
An integration test can expose the mapping mismatch, while a system test checks the complete user-visible result.

You Do — source mark schemes

1. [4] Unit [1], integration [1], system [1], acceptance [1].

2. [6] Reproduce failure [1]; inspect changed rule and expected behaviour [1]; step through registration [1]; correct fault [1]; rerun registration unit/integration tests [1]; rerun previous login tests for regression [1].

3. [6] Executing every line may not test all branches or input combinations [2]; use boundary and erroneous test cases [1], integration tests [1], realistic user acceptance scenarios [1] and regression tests after changes [1].

Exit Ticket — source answer

1. False. Interactions, full-system behaviour and user requirements require further testing.
