STAFF REVIEW · H446 259 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. It can execute many similar operations concurrently.

2. Intermediate arithmetic/logical result.

3. Data remains stored without power.

4. $00000110_2 = 06_{16}$.

I Do — source worked steps

1. Predict — An SSD is attractive for frequent portable access and avoiding moving parts.

2. Explain — An HDD can offer capacity at a lower cost; backups remain necessary regardless.

We Do — guided CHECK

1. Predict
An optical disc can distribute static content without needing a network connection.
Explain
Check disc and drive compatibility and whether updates/reuse are needed.

You Do — source mark schemes

1. [6] HDD magnetic [1] spinning platter [1]; DVD optical [1] laser-read pattern [1]; USB flash semiconductor [1] non-volatile cells [1].

2. [6] Faster random access [2], shock resistance due to no moving mechanism [2], typically higher cost per GB [2].

3. [6] SSD for regular work/low latency [2]; HDD or suitable archival medium for infrequent bulk data [2]; maintain separate secure backups and check recovery [2].

Exit Ticket — source answer

1. False. USB flash uses semiconductor cells.
