Exit Ticket · reflect and retrieve

Exit Ticket

Source code posted online automatically gives unrestricted modification rights.

Use key vocabulary from memory

1. Explain application in your own words.

2. Explain utility in your own words.

3. Explain open-source in your own words.

Confidence and next step

How confident are you? Thumbs up / side / down

Which question would you improve after checking the classroom model?

Check answers after the lesson using the teacher-guided source models.

Do Now · retrieval

Applications, utilities and source licensing

Name: _____ Class: _____ Date: _____

Answer four retrieval questions before reviewing earlier learning.

Q1

What is a hypervisor?

Q2

Why is a driver required?

Q3

Define a utility.

Q4

Full adder inputs 1,1,1: what are sum and carry-out?

New Learning · key ideas

The important knowledge from today's lesson. Read, annotate, and explain it.

Core idea 1

Understand — Application software provides end-user capabilities; utilities perform system maintenance, protection or management.

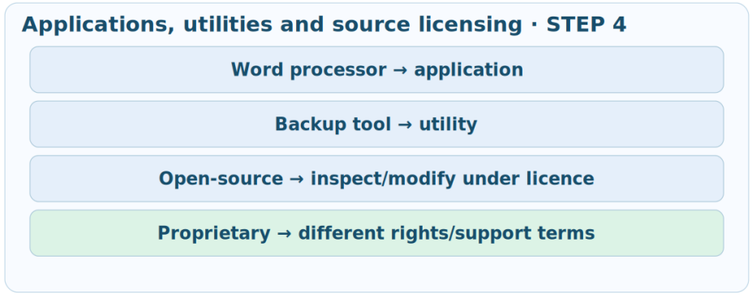

Core idea 2

Trace — Open-source means qualifying licences grant rights to inspect, change and redistribute source code under terms.

Core idea 3

Evaluate — Proprietary licensing can restrict modification. Compare cost, support, compatibility, accessibility and staff skills.

Key visual · complete concept

Annotate the key visual

Explain which labels or features show the main process.

You Do · extended practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 3

Evaluate changing school software from proprietary to open-source. [6]

Check that you have used the technical terms and explained your decisions.

You Do · independent practice

Answer these selected original questions in BLACK PEN. Other exam tasks remain online.

Question 1

Classify spreadsheet, backup, photo editor and disk cleanup. [4]

Question 2

Compare open and closed-source distribution and give one benefit of each. [6]

Check that you have used the technical terms and explained your decisions.

New Learning · applying the ideas

Vocabulary · use the correct technical terms

application — End-user task software.

utility — System-management program.

open-source — Qualifying source-available licence.

licence — Conditions for use and distribution.

Check your understanding

Explain one key process in your own words using two of the terms above.

More animated examples are available in the original online lesson.

I Do · worked example

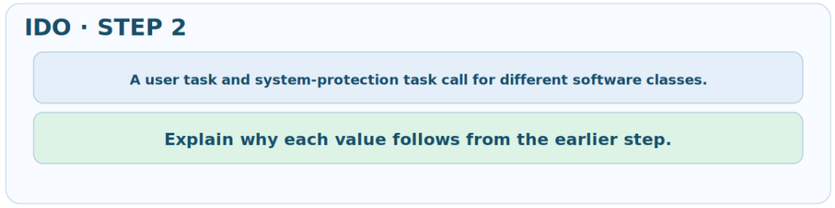

Problem

Select software to write a report and protect copies.

Follow the worked method

1. Predict first — A user task and system-protection task call for different software classes.
2. Model and check — Explain why each value follows from the earlier step.

Source model · final illustrated step

Why this method works

Identify the decision, rule or invariant that makes the method correct.

We Do · Try → Discuss → Improve

TRY independently in BLACK PEN; compare methods with a partner; improve your reasoning.

Guided problem · TRY

Predict first

The licence fee alone does not capture staff training, integration and upgrade costs.

DISCUSS

Compare how you reached the answer. Where could someone make an error?

IMPROVE

Add one precise correction or a stronger reason. Answers are not printed here.
