STAFF REVIEW · H446 273 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Loads value into ACC from mailbox.

2. Machine-executable program representation.

3. Human-readable instruction abbreviation.

4. mid4→14, mid6→20, mid7→23; indexes 4,6,7.

I Do — source worked steps

1. Predict first — A compiler translates the original language into target/object code

2. Model answer — linking resolves required components.

We Do — guided CHECK

1. Predict first
An assembler converts symbolic instruction representations into machine instruction encodings.
Model answer
Explain the reasoning and justify the output.

You Do — source mark schemes

1. Compiler translates source to target code [1]; interpreter runs code using runtime [1]; assembler maps assembly to machine instructions [1].

2. Compiled output may be distributed separately [2]; interpreter/runtime required for interpreted execution [2]; translation timing and error reporting can differ [2].

3. Interactive execution/feedback [2]; convenient debugging [1]; runtime dependency [1]; compiled deliverable useful for native deployment [1]; performance/cross-platform trade-offs [1].

Exit Ticket — source answer

1. True.
