STAFF REVIEW · H446 274 source models

Separate from the eight-page pupil workbook. This copy is in a public repository and is NOT access controlled. Check technical correctness before use.

Printed question mapping: Booklet Q1 = original online Q1; Booklet Q2 = original online Q2; Booklet Q3 = original online Q3

Do Now — source answers

1. Assembler.

2. Target/object code.

3. A system that executes/analyses source or intermediate operations at runtime.

4. ¬A∧¬B; with A=0,B=1 gives 1∧0=0.

I Do — source worked steps

1. Predict first — The lexer recognises tokens

2. Model answer — parser checks that they form a valid assignment statement.

We Do — guided CHECK

1. Predict first
The linker finds its definition in the module/library and fixes up the reference before execution.
Model answer
Explain the reasoning and justify the output.

You Do — source mark schemes

1. Tokens [2], grammar/parse [2], type/name and contextual rules [2].

2. Generate target instructions [2]; resolve external references and combine object code/libraries [2]; place executable in memory and start [2].

3. Lexing tokens valid [1]; parsing structure valid [1]; semantic name/symbol resolution can reject undefined identifier [2]; external symbol might instead fail during linking if declaration exists but definition missing [2].

Exit Ticket — source answer

1. False. That is a semantic/name-resolution concern.
